## Key Highlights

EDPR installed capacity increased to **12.6 GW** as of Jun-21 (+1.15 GW YoY), with **Europe and North America representing 40% and 56%** of the portfolio, respectively.

Capacity additions YTD amount to **0.7 GW** and EDPR has currently **2.9 GW of capacity under construction**. Following the successful completion of the **Asset rotation deal in the US** (68% stake of a 405 MW wind portfolio), **net additions YTD total 0.4 GW**.

EDPR generated **15.3 TWh of clean energy in 1H21** (+5% YoY), avoiding 10mt of CO2 emissions, with **Europe and North America representing 38% and 59% of total generation output**, respectively. In Europe, generation increased 14% YoY, impacted by higher installed capacity and higher resource. In North America, output decreased 1% YoY reflecting the new capacity in operation offset by low resource and the impact of the one-off ERCOT event in 1Q21. In Brazil, production increased 27% driven by higher installed capacity along with higher resource.

In the 1H21, EDPR achieved a **31% load factor** (-0.5pp YoY) reflecting a Renewables index of 95% of P50 expected long term average Gross Capacity Factor.

In Jun-21, EDPR entered in Vietnam with the acquisition of a 28 MWac solar project, which represents the **first step towards the establishment of EDPR's presence in APAC**, where EDPR expects to invest **part of the c.5% allocated to Other geographies** within the 20 GW growth plan until 2025.
