USA	31.0%	

• EDP Renováveis is a leading, pure play, global renewable energy business focused on onshore wind, with gross installed wind capacity of 4,155 MW at Set-08 generating total gross profit of €402 million and EBITDA of €307 million with an EBITDA margin of 76.3%. EDPR was ranked by Emerging Energy Research (EER) fourth in the world in wind energy as of Dec-2007.

• On the last 12 months, EDPR increased its installed capacity by 1,423 MW proving its ability to install 1.4 GW in a year. In the 9M2008 were installed 515 MW, of which 272 MW in Europe and 243 MW in US. Currently EDPR has 1,612 MW under construction, already providing strong visibility on the capacity to be installed in 2009 (0.7 GW under construction for 2009).

• In 9M2008, EDPR portfolio of projects increased to 29.2 GW. EDPR has a robust portfolio providing the company with enough optionalities and flexibility to maintain profitability and feed growth ambitions. To move forward projects in the pipeline until the construction phase, the company has a rigorous capital allocation to maximize returns and to foster healthy competition between projects.

• Load factors in Europe reached 25% and in US 31%, and continue to reflect EDPR's above average load factors vis-à-vis the rest of the market. It is important to highlight that EDPR achieved a 25% load factor in Spain, which is a premium of c200bps when compared to the Spanish market.

• Gross profit reached €402m, on the back of higher electricity output to 5,353 GWh, up 76% YoY, and attractive selling prices of €97.9/MWh in Europe and \$87.0/MWh in US (including PTCs). This enabled to reach an EBITDA of €307m and an EBITDA margin of 76%.

• In the 9M08 EDP Renováveis invested c€1,250m, of which c40% with projects already concluded and c60% with projects under construction and turbine deposits. It is important to highlight that currently EDP Renováveis has €1,229m as works in progress related to capacity under construction and turbine deposits.

• Net debt decreased substantially in the 9M08 to €513m, reflecting the €1.3bn regarding the capital contribution of shareholder loans, that was made in May-08, and the €1,567m cash proceeds from the IPO. Financial debt as of Sep-08 was €1,198m and cash and equivalent was €685m.

<sup>(1)</sup> Includes revenues from the sale of interests in institutional partnerships

Note: The financial statements presented in this document are non-audited.

• To deliver a long-term profitable growth, EDP Renováveis' strong focus is to bring value enhanced wind projects into completion and operation.

• In 9M2008, EDP Renováveis increased its installed capacity by 515 MW, of which 272 MW in Europe and 243 MW in US. In Europe, the following wind farms started operations during 3Q08: Acampo Arias (49MW - Spain), Lucillo (18MW - Spain), SEA Tarifa (44MW repowering - Spain), Aysennes (12MW - France) and Boubriac (10MW - France). Whereas in US, EDPR installed 177MW of Pionner Prairie I wind farm (198MW). In October, EDP Renováveis already started to install the first MWs at Meridian Way (201MW) and Rattlesnake (103MW) wind farms.

• EDP Renováveis is on track to achieve the 1.4 GW of additional capacity forecasted for YE2008. With more than 1.6GW under construction, what provides strong evidence on the company's ability to manage the construction works of more than 2,000MW since the beginning of 2008, EDP Renováveis already has strong visibility on the capacity to be installed in 2009.

• EDP Renováveis pipeline reached a robust 29.2 GW. The enlarged pipeline gives EDPR enough matured optionalities to maintain a profitable growth and confidence to achieve long term targets. EDPR follows a very rigorous capital allocation criteria based on profitability and value creation to the shareholders. The large pipeline allows the selection of the best projects to move forward to the construction phase. This will be enhanced by limiting the allocation of capital to foster a healthy competition between regions and projects to become eligible for the start-up.

• EDPR's pipeline was enhanced by the acquisition of 1,296 MW under development in France (560 MW) and Romania (736 MW - acquired in October) in different stages of maturity and prime locations, enabling EDP Renováveis to selectively diversify its portfolio of growth options.

See page 16, for a description on project classification methodology.

<sup>&</sup>lt;sup>(1)</sup> Pipeline in Romania was acquired in October 2008. Included in the above table for ilustration purposes.

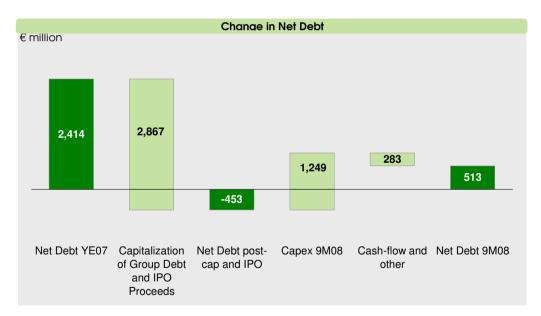

#### **Capex and Net Debt**

(€m)	Develop.

1.229

Total

• Net debt decreased substantially essentially reflecting two main events in the 2Q08: the capital contribution of €1.3bn of shareholder loans in May-08 and the proceeds from the IPO in June-08, amounting to €1,567m. The proceeds from the IPO were used to cancel shareholder loans and with the remaining was made a short-term loan to EDP Group ("Loans to related companies"). Net Debt post-cap and post-IPO increased to €513m in 9M08 following the capex incurred in the period, which was partly compensated by the stable and recurrent cash-flow of the existing assets.

• Capex in the period amounted to €1,249m, of which €511m in Europe and €738m in US (\$1,128m), reflecting the end of construction of 515 MW, the 1,612 MW under construction and turbine deposits made during the period.

• Capital expenditures in the 9M08 with projects already in operation amounted to c€460m (reflects in part capex from 2007 projects and the end of construction of 515MW). Investments in capacity under construction and development reached c€790m, of which €132m related to turbine deposits.

• It is important to highlight that total works in progress related to capacity under construction/development amounted to €1,229m, reflecting the cash-out already incurred with this projects.

Net Debt (€ m)	I 9M08 I	2007YE
Bank Loans and Other Loans with EDP Group Related Companies	591.1 606.9	510.5 2.371.6
Financial Debt	1,198.0	2,882.1
Cash and Equivalents	290.0	388.5
Loans to EDP Group Related Companies Financial assets held for tradina	366.4 28.6	34.3 44.8
Net Debt	513.0	2,414.5

Institutional Partnership (€ m)	9M08	2007YE
Institutional Partnership Liability (-) Deferred Revenue	925.0 -155.8	733.3 -28.6
Adjusted Institutional Partnership Liability	769.2	704.7

• At the 9M2008 EDP Renováveis has a cash and similars position of €685m. External debt with financial institutions amounts to €591m, which includes debt related to project finance with a long-term profile.

• Institutional partnership liability increased from €705m in 2007 to €769m in the 9M08 (€739m in the 1H08). The non-current deferred revenue is related to tax benefits already attributed to institutional investor and to be recognised in the P&L in the future.

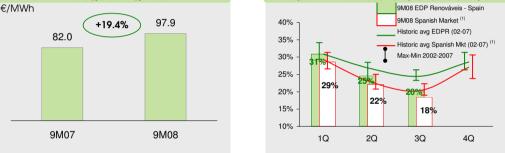

• It is important to highlight that EDPR will be mainly financed via shareholder loans from EDP parent. Institutional partnerships will be the second source of funding, in order to monetize tax credits in USA, followed by project finance debt only in particular cases.

```
<sup>(1)</sup> Excludes works in progress related to PPA and to capacity already in operation
```

#### Europe

• As of Sep-08, EDP Renováveis wind installed capacity in Europe totalled 2,005 MW, up 587 MW YoY, reflecting the delivery of our wind farms' pipeline on schedule. By the end of Sep-08, EDP Renováveis in Europe had 987 MW under construction, out of which 783 MW in Spain, 78 MW in Portugal, 126 MW in the Rest of Europe.

• Electricity output from wind power increased by 29% YoY, to 2,777 GWh, on the back of the additional capacity that was brought on stream on the last 12 months (587 MW). Our portfolio of wind in Europe recorded a 25% average load factor in the 9M08.

• On a QoQ basis, the average load factor in Europe decreased from the 24.3% in 2Q08 to 20.3% in 3Q reflecting the seasonality effect of the wind resource throughout the year. In terms of YoY volatility, we highlight the importance of the portfolio effect which reduces the energy production variance of the portfolio vs. individual wind farms. In Europe, EDP Renováveis has close to 90 wind farms in operation, in 7 different regions of Spain, in Portugal and in France.

Employees	320	273	17.2%

• Gross profit increased 52.9% YoY, to €277m, following i) the higher installed capacity (+587 MW), and ii) an increase of 19.4% in average selling prices in Europe, on the back of an increase in Spanish pool prices when compared to 9M07.

• Operating costs increased 45.7% vis-à-vis 9M2007, mainly driven by the business growth, which is mainly reflected in i) higher O&M expenses related to the entry into operation of new capacity, and ii) higher personnel costs due to additional headcount to fuel the activity growth. In terms of operating costs per average MW installed (€43.3th), the yearly increase is in line with inflation.

• Overall, EBITDA improved €77m YoY to €217m in 9M008, driven by the strong gross profit performance. EBITDA margin had a solid improvement of 110bps when compared to 9M2007.

### **Europe: Spain**

Installed Capacity (EBITDA MW)	I 9M08 I	9M07   <b>△ 08/07</b>
MW under RD 436/2004 MW under RD 661/2007	1,066 278	951 +115MW - +278MW
Total MW	1,344	951 +393MW

Ava. Load Factors (%)	9M08	9M07 🛛 🛆 08/07
Load Factor	24.8%	26.5% (1.7 pp)

Electricity Output (GWh)	9M08	9M07	I ∆ 08/07
Total GWh	1,875	1,519	23.4%

Averaae Tariffs (€/MWh)	I 9M08 I	9M07	∆ 08/07
Avg. Price achieved in the Pool	62.1	34.8	78.5%
Avg. Final Tariff	99.4	76.6	<u>29.7%</u>

P&L Hiahliahts (€m)	9M08		9M07	I ∆ 08/07
Gross Profit Operating Costs EBITDA EBITDA/Gross Profit	186. 25. 161. 86.5	1	<b>105.</b> 17. <b>88.</b> 83.29	8 41.0% 0 83.2%

• In Spain, gross profit increased 76.0% in the 9M2008 following: i) the increase in installed capacity vs. 9M2007; ii) a 29.7% increase in the average final electricity tariff; and iii) the maintenance of load factors close to 25% levels

• As of September 2008, EDP Renováveis wind installed capacity increased to 1,344 MW, up 393 MW YoY, reflecting the 314 MW installed in 4Q07 and 79 MW along 2008. It is important to highlight that out of the total installed capacity in Spain, 278 MW or 21%, are under the new RD 661/2007 regime, which mainly differs from the old regime on the application of a floor and cap to the premium paid to the wind operator when it chooses the market option (see table).

• In Spain, EDP Renováveis' continue to deliver load factors over market average. On a quarterly basis, despite the wind seasonality and the lowest wind availability in the last 5 years EDPR was able to keep its spread above market average: i) 31% in 1Q08 vs. 29% of the market; ii) 25% in 2Q08 vs. 22% of the market; and iii) 20% in 3Q08 vs. 18% of the market.

#### **Remuneration Scheme**

#### RD 436/2004

**Applicability:** Only applicable to wind farms that started operations before 2008. Wind farms have to decide before 2009 if they maintain this remuneration scheme or join the new one. Wind farms that choose the market option have a transitional period until December 2012.

#### **Two Options:**

**1.** Fixed tariff - fixed at the same value (no actualization) for the whole life of the project.

2. Market tariff - market indexed revenues equals achieved pool price plus a premium+incentive with no explicit cap or floor (premium+incentive was set at €38.3/MWh for 2008).

Additional revenues: reactive power and voltage dips

#### RD 661/2007

**Applicability:** Compulsory for all wind farms that start operations after 2008.

#### Two Options:

**1.** Fixed tariff - fixed for the first 20 years at a value indexed to CPI-x, remaining years at a different value.

**2.** Market tariff - market indexed revenues equals pool price plus a premium with a cap and a floor. Premium in 2008 was set at  $\notin$ 30.3/MWh, while the cap and floor at  $\notin$ 87.8/MWh and  $\notin$ 73.3/MWh, respectively. For the hours in which pool price is higher than the cap, the wind farm receives the pool price. All values, for the exception of the pool price, are fixed for 20 years and indexed to CPI-x.

Additional revenues: reactive power

### All the wind farms that contribute to Spain's EBITDA are under the market option

• Average final tariff went up 29.7% YoY on the back of higher pool prices in Spain. During this period market prices were influenced by the increase on fossil fuel prices which peaked during the summer. As a result EDPR's average price in wind farms reached  $\in 62.1/MWh$  up 78.5% (pool price was  $\in 64.4/MWh$  – due to a different power curve wind farms typically achieve an average price below market).

• All in all, EBITDA in Spain increased by a sound 83.2%, while EBITDA margin increase to 86.5% (+340bp vs 9M07).

### **Europe: Portugal**

Installed Capacity (EBITDA MW)	I 9M08	9M07 I	∆ <b>08/07</b>	Remuneratio	n Scheme

Averaae Tariffs (€/MWh) Avg. Final Tariff	I 9M08 100.1		∆ 08/07 2.5%	<b>Duration:</b> 15 years since the publication of DL 33A/2005, pool + green certificates thereafter if applicable.	<b>Duration:</b> 33 GWh of production up to 15 years limit, pool + green certificates thereafter if applicable.
P&L Hiahliahts (€m)	I 9M08	I 9M07 I	∆ <b>08/07</b>	Indexation to operating hours: yes.	Indexation to operating hours: no.
Gross Profit Operating Costs EBITDA EBITDA/Gross Profit	<b>73.6</b> 14.7 <b>58.9</b> 80.0%	11.2 <b>43.9</b>	<b>33.6%</b> 31.3% <b>34.2%</b> 0.3 pp	All the wind farms that contr are under the old	0

• In Portugal, gross profit increased 33.6% in 9M2008 following: i) the increase in installed capacity vs. 9M2007; and ii) the increase in load factor to 25.9%.

 In 9M2008, EDP Renováveis wind installed capacity increased by 126 MW YoY, to 517 MW, reflecting the 32 MW installed in 4Q07 and 93 MW installed in 2008. It is important to highlight that the current operating assets, as well as those under construction, are under the old regime. New regime will be applied only to the 480 MW (1,200 MW for the consortium) attributed in the competitive auction, which are currently classified as Tier I projects.

 In 9M2008, EDP Renováveis was able to increase load factor by 60bps YoY, to 25.9%, benefiting from the good wind resource in the months of February, March, April and August. On a guarterly basis, load factors decreased to 21.0% in 3Q08 from 24.9% in 2Q08, explained by the wind seasonality.

 Average electricity prices increased 2.5% to €100.1/MWh in the 9M2008 vs. the 9M2007, which is in line with inflation. Note that tariffs under the old regime are indexed to the operating hours and the final adjustment to the formula calculation occurs at the end of each year.

 In 9M2008, EBITDA increased 34.2% to €59m on the back of the strong gross profit performance. EBITDA margin improved 30bps YoY, reaching the 80.0% level.

#### **Europe: Rest of Europe**

Installed Capacity (EBITDA MW)	9M08	I	9M07	1	∆ <b>08/07</b>
MW - France	14	4	7	'5	+69MW

Ava. Load Factors (%)	9M08	9M07	∆ 08/07

• In France, gross profit increased more than 100% in the 9M008 on the back of a 116.7% increase in the electricity output.

• Load factors in 9M2008 decreased to 22.7% affected by the low wind resource in the 3Q08. On a quarterly basis, load factors stood at 20% in 2Q and 3Q explained by the seasonality effect and low wind resource in June, July and August.

• Average final tariff decrease 3.7% to €73.2/MWh explained by the trial period on the wind farms acquired from EOLE 76 and Eurocape, that started operations in 2Q08 with a total installed capacity of 35 MW. By law, wind farms in the trial period receive €17/MWh. The average final tariff corrected by this effect would be €84/MWh.

• With French operations starting to get more visibility, 9M2008 Gross Profit improved 110.5% to €13m, while EBITDA reached €10m. EBITDA margin stayed at 74.0% and was mostly influenced by the lower wind resource in the period.

<b>Remuneration Schemes</b>	
-----------------------------	--

Rest of Europe comprises France, Belgium, Poland and Romania. In France EDPR already has operating assets, whereas in Belgium and Poland has capacity under construction and under development in the pipeline. In Romania capacity is solely under development.

France

**System:** Feed-in tariff, stable for 15 years. Two different systems applicable to wind farms with contracted sales before and after July 2006 (EDPR only has 9MW under the old system).

#### Current remuneration (2006):

- First 10 years: wind farms received €82/MWh; indexation is inflation type and with an x factor only until the start of operation.

- Years 11-15: depending on the load factor wind farms receive €82/MWh @2,400 hours decreasing to €28/MWh @3,600 hours.

**System:** Market price plus green certificate system. Separate green certificate prices with cap and floor for Wallonia (€65/MWh - €100/MWh) and Flanders (€80/MWh - €125/MWh). Option to negociate long-term PPAs.

Poland System: Market price plus green certificate system. DisCos have a minimum purchase price of 128.8 PLN/MWh and penalty of 248.4 PLN/MWh. Option to negociate long-term PPAs.

• In Apr-08, EDP Renováveis, reinforced its presence in European wind generation market through the acquisition of the French companies EOLE 76 and Eurocape, with 35 MW operating and several wind farm projects under development comprising 560 MW: 8 MW under construction, 12 MW in Tier I; 14 MW in Tier II; 232 MW in Tier III; and 294 MW as prospects.

• Already in October 2008, EDP Renováveis acquired several wind projects in Romania totalling 736 MW in different stages of maturity and in prime locations: i) 225 MW classified as Tier 1; ii) 60 MW classified as Tier 2; lii) 12 MW classified as Tier 3; and iv) 440 MW classified as prospects. The acquisition is in line with EDP Renováveis strategy of entering new geographies through a very selective approach to deliver long-term profitable growth, balancing attractive returns and controlled risk.

• In Jul-07, EDP Group concluded the acquisition of Horizon Wind Energy. Horizon was incorporated in EDP Renováveis with its creation on December 2007.

• By the end of Sep-08, EDP Renováveis wind installed capacity in USA totalled 1,497 MW, more 792 MW than in 9M2007, reflecting the 549 MW installed in 4Q07 and 243 MW in 2008. Currently, EDP Renováveis has another 625 MW under construction in the USA.

• Following the strong increase in installed capacity, electricity output went up 187.4% YoY, totalling 2,576 GWh. Load factors in the period reached 31.0% and vis-à-vis 9M2007 reflect the substantial change in EDPR portfolio vis-à-vis 9M2007. Also availability factors continue to increase QoQ. Note that availability reductions in newly operated wind farms are financially covered under the existing manufacturers' warranties and the credit is accounted as other income.

# Income Statement (\$ m) I 9M08 Revenues 128.6

• Average electricity price in the period was \$49.2/MWh. Note that 77% of EDPR's installed capacity is under long-term PPAs, 12% are waiting for a PPA to be signed, 9% hedged and 2% merchant. In terms of unit revenues from institutional partnership, this figure is composed by the benefits from PTCs ("Production Tax Credits") and other related revenues from institutional partnership (note that for illustration purposes the \$38/MWh are grossed up with taxes in the total selling price, whereas in the P&L is recorded a net benefit of \$63 million).

• EBITDA in the 9M2008 reached \$139m, with the 3Q08 contributing with \$22m coming short from the values achieved in the 1Q and 2Q due the wind seasonality effect.

• In the beginning of July EDP Renováveis signed a 15-year PPA with PG&E for the Rattlesnake wind farm (103 MW – to start in 4Q08) and in August signed a 20-year PPA with Snohomish County Public Utility District for the Wheat Field wind farm (97MW – to start in 1Q09).

Notes to pro-forma consolidated figures:

- Include both Europe and USA financials for the full year

- Include Institutional Partnership revenues in USA for the full year (+€10.3 million) - USA financial figures only include Institutional Partnership revenues since mid July 2007

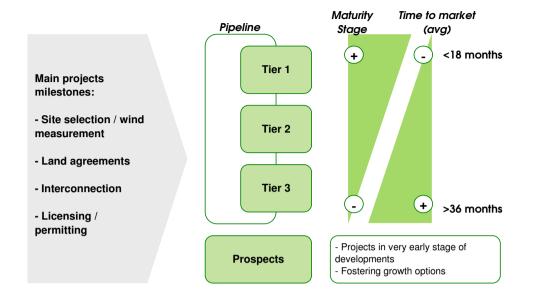

- Does not include non-recurring events

# Annex

### **Project Classification Methodology (non-exhaustive description)**

EDPR's wind project classification reflects the maturity of each project. The methodology is based on analyzing the progress made and milestones achieved by each project in respect of each of the key phases in wind farm development prior to construction and commissioning (namely site selection and wind measurement; land agreements; interconnection; and licensing and permitting), across all the countries in which operates.

Such methodology is adapted to the specifics of each country due in particular to the different regulatory and licensing process and other legal and practical considerations that apply in each country. The methodology reflects a rigorous and objective approach that is tailored to the specific characteristics of each jurisdiction and accordingly provides a significant level of assurance and clarity regarding the stage of development and maturity of the pipeline projects and prospects. In particular, this classification provides a significant visibility regarding the time-to-market of the portfolio of projects, which in turn enhances EDPR's management and achievement of its growth targets.

Projects are segmented into pipeline and prospects according to maturity. On average, we estimate that Tier 1, Tier 2 and Tier 3 pipeline projects are likely to come to market in less than 18 months <sup>(1)</sup>, between 18 months and 36 months, and more than 36 months, respectively.

EDPR has a well-defined process for pipeline progression and origination to feed growth ambitions. New projects need to feed future expected growth, replace terminated projects and provide maximum optionality over growth strategy.

Adapted by country		Prospects		
	Tier 1	Tier 2	Tier 3	Fluspects
Iberian Peninsula	<ul> <li>Administrative license received</li> <li>Land agreements generally &gt;90%</li> <li>Grid connection generally secured</li> </ul>	<ul> <li>Environmental authorization</li> <li>Land agreements: 50%–90%</li> <li>Grid connection in progress</li> </ul>	<ul> <li>Land agreements: 10%–50%</li> <li>Detailed engineering and construction blue prints completed</li> </ul>	<ul> <li>Preliminary studies of site feasibility</li> <li>Land agreements: 0-10% or preliminary promissory agreements</li> </ul>
