

EDPR's Stocare Project is presented with the Energynomics Award

Located next to the Cobadin Wind Farm in the Romanian region of Constanza, the Stocare Project is a pioneering battery-based energy storage facility

Madrid, 13th December 2018: EDP Renewables S.A. ("EDPR"), leader in the renewable energy sector and one of the largest wind energy producers in the world, has been recognised by Romania's Energynomics for its Stocare Project at the Cobadin Wind Farm in the region of Constanza, which has scooped the "2018 Year Premier" prize.

Stocare Project is battery-based energy storage system connected to one of EDPR's wind farms. When there is excess production, the system will charge the batteries, and when production is lower than expected, the energy stored in the batteries will be provided to consumers. This type of energy storage facility could provide a breakthrough in the energy market over the coming years by turning renewable energies such as wind and photovoltaic solar power into consistently available energy sources, as well as making them more efficient and reliable.

Energynomics Award recognises excellence across a number of energy-related fields: electricity, renewable energy, energy efficiency, smart energy, mergers and acquisitions.

João Manso Neto, CEO de EDPR said: *"I am extremely grateful to the judging panel for this recognition, which confirms that our commitment to pioneering projects like Stocare is the way forward. We are delighted to receive this prize which demonstrates that we are at the cutting edge of wind energy storage solutions"*.
