## OPRHP MANAGEMENT SUMMARY

SHPO Project Review Number:	06PR000069
Involved State and Federal Agencies:	NYS Department of Public Service NYS Department of Environmental Conservation US Army Corps of Engineers
Phase of Survey:	Phase 1B Archeological Survey
Location Information	
Location:	vicinity of Churubusco (hamlet)
Minor Civil Divisions:	Towns of Clinton (01907) and Ellenburg (01909)
County:	Clinton County
Survey Area	
Project Area:	18,520 acres
Archeological APE:	367.5 acres (Phase 1B layout was 267 acres)
Number of Acres Surveyed:	328.5 acres
USGS 7.5-minute Quadrangle Map:	Churubusco, N.Y.; Ellenburg Center, N.Y.
Archeological Survey Overview	
Number & Interval of Shovel Tests:	3,912 shovel tests at 5-meter (15-foot) intervals
Surface Survey Acreage:	84 acres
Width of Plowed Strips:	existing fields (not strips)
Surface Survey Transect Interval:	3-5 meter intervals (10-15 feet)
Results of Archeological Survey	
Number & name of historic sites identified:	01907.000077 Liberty Pole Road 1 Site 01907.000078 Liberty Pole Road 2 Site 01907.000079 Durant Site 01907.000080 Goka Site 01907.000081 Merchia Road Site 01907.000082 Boomhower & Humphrey Site 01907.000085 Clark Site 01907.000086 Saphouse Site 01907.000087 Wilkins Road Site 01907.000088 Clinton Mills Historic Site 01907.000089 Ogdensburgh & Lake Champlain RR 01909.000045 Patnode Road 1 Site 01909.000046 Patnode Road 2 Site
Sites recommended for additional investigation:	01907.000088 Clinton Mills Historic Site
Report Author:	Patrick J. Heaton, RPA John Milner Associates, Inc.
Date of Report:	May 2007

## MANAGEMENT SUMMARY

John Milner Associates, Inc. (JMA) conducted a Phase 1B archeological survey for the Marble River Wind Farm located in the Towns of Clinton and Ellenburg, Clinton County, New York. The survey was conducted on behalf of ESS Group and Marble River, LLC for a proposed 218 megawatt wind power generating facility (the Project). The information and recommendations contained in this report are intended to assist the Towns of Clinton and Ellenburg in evaluating the potential effects of the project in accordance with their obligations under the New York State Environmental Quality Review Act (SEQRA). The archeological fieldwork followed the methodology and research design presented in the *Phase 1B Archeological Survey Work Plan* that was accepted and approved by the New York State Office of Parks, Recreation and Historic Preservation (OPRHP) in correspondence dated April 17, 2006. The research design, fieldwork, and report preparation for the archeological survey were conducted in accordance with the New York State Historic Preservation Office Guidelines for Wind Farm Development Cultural Resources Survey Work (the SHPO Guidelines) issued by the OPRHP in January of 2006.

Project facilities will be located on 130 parcels of leased private land totaling approximately 18,520 acres of farmland and forest areas (the Project Area), although the actual area of potential effect (APE) for direct ground disturbing activities will be only a fraction of this area. The APE for direct, ground-disturbing activities includes the proposed locations for 109 wind turbines, approximately 48 miles of gravel access road, 53 miles of underground electric collection cable, up to 13 miles of overhead electric collection line right-of-way, and a switchyard.

No Native American prehistoric sites were identified within the Project Area. Only two possible Native American prehistoric artifacts were recovered (from different locations) during the Phase 1B survey. Both of these objects are battered quartzite cobbles that exhibit scarring along one edge. Based on the lack of additional (and more convincing) cultural materials in the vicinity of each of these finds, JMA determined that the cobbles are likely the product of natural or inadvertent activities or processes (such as glacial action, freeze-fracture, or plow-shatter), and are not evidence of an archeological deposits.

JMA documented 13 historic archeological sites that are located within the Project Area. These sites include the former route of the abandoned Ogdensburgh & Lake Champlain Railroad, the remains of the map-documented lumber mills and company town at Clinton Mills, and foundation remains of structures (mostly farmhouses) that are depicted on historic atlases of the area. Construction of the Project may result in impacts to three of these sites: Clinton Mills, the former railroad route, and the Merchia Road Site (the foundation remains of a farmstead).

The Phase 1B fieldwork included the excavation of 3,912 shovel tests (equivalent to 244.5 acres) and pedestrian surface survey of approximately 84 acres, for a total Phase 1B survey level of effort equivalent to 328.5 acres. As a result of Project layout changes and additions that occurred subsequent to the Phase 1B survey fieldwork, the archeological APE for the Final Project Layout is larger (367.5 acres) than the level of effort expended during the Phase 1B survey, resulting in a shortfall of 39 acres of un-surveyed archeological APE. JMA is currently conducting supplemental Phase 1B archeological survey to include these additional 39 acres of archeological APE. The results of the supplemental Phase 1B survey work will be presented in an addendum report included with the FEIS.

As a component of the supplemental survey fieldwork, JMA recommends that additional Phase 1B work be conducted within those portions of the Clinton Mills Site where Project facilities may be located to better document the presence of foundations and other features associated with site and determine whether subsurface archeological deposits are present. In the opinion of JMA, construction along the former route of the railroad should include both measures to avoid any permanent demolition or obstruction of the railroad route and provisions to restore and maintain the former railroad route in this area so that it continues to be a readily apparent landscape feature. Marble River, LLC has relocated Project facilities in the vicinity of the Merchia Road Site to insure that the documented features at the site are not impacted during construction.

## 1.0 INTRODUCTION

### 1.1 PURPOSE AND GOALS OF THE INVESTIGATION

On behalf of ESS Group, Inc (ESS) and Marble River, LLC, John Milner Associates, Inc. (JMA) conducted a Phase 1B archeological survey for the Marble River Wind Farm located in the Towns of Clinton and Ellenburg, Clinton County, New York. The information and recommendations contained in this report are intended to assist the Towns of Clinton and Ellenburg in evaluating the potential effects of the project in accordance with their obligations under the New York State Environmental Quality Review Act (SEQRA).

The purpose of the Phase 1B survey is to locate previously unrecorded archeological sites that may be present in the project's area of potential effect (APE), and determine if any such sites could be affected by project-related construction or operation. The research design, fieldwork, and report preparation for the Phase 1B archeological survey were conducted in accordance with the *New York State Historic Preservation Office Guidelines for Wind Farm Development Cultural Resources Survey Work* (the SHPO Guidelines) issued by the New York State Office of Parks, Recreation and Historic Preservation (OPRHP) in January of 2006.

### 1.2 PROJECT LOCATION AND DESCRIPTION

Marble River, LLC, proposes to construct a 218-megawatt (MW) wind-powered electric generating facility (the Project) within the Towns of Clinton and Ellenburg in Clinton County, New York (Figure 1). The Project will include 109 wind turbines, each with a generating capacity of 2.0 MW. Other project components include approximately 48 miles of gravel access road, approximately 53 miles of underground electric collection cable, up to 13 miles of overhead electric collection line right-of-way, and a switchyard adjacent to the existing NYPA 230-kV electric transmission line located along the Town of Ellenburg/Clinton town line.

The 109 wind turbines proposed will be Model G87 Gamesa Eolica (or machines with equivalent specifications). These turbines consist of a 78-meter (256-foot) tall tubular steel tower; an 87-meter (285-foot) diameter rotor consisting of three 43-meter (139-foot) long composite blades; and a nacelle which houses the generator, gearbox, and power train. Each turbine will have a maximum height of approximately 122 meters (399 feet) from base to blade tip (with a rotor blade oriented straight upwards). The towers have a base diameter of approximately 15-feet and a top diameter of approximately 8 feet. All turbine components will be painted white to make the structures less visibly intrusive.

Project facilities will be located on 130 parcels of leased private land totaling approximately 18,520 acres of farmland and forest areas (the Project Area), although the actual area of potential effect (APE) for direct ground disturbing activities will be only a fraction of this area. The APE for direct, ground-disturbing activities includes the proposed locations of wind turbines, the substation, staging areas, access roads, overhead electric line right-of-way, and buried electrical interconnects. More detailed discussions of the archeological APE and associated level of effort (LOE) for the Project are presented in Sections 2.1 and 4.2.

The proposed Project layout at the time that the Phase 1B fieldwork was conducted (May-June 2006) is identified in this report as the Phase 1B Project Layout (depicted in a yellow/brown color-scheme on Figures 2-4; Appendix A). Subsequent to the conduct of fieldwork for the Phase 1B survey, elements of the proposed Project layout were revised. The Final Project Layout is depicted on Figures 1-4 and Appendix A in a blue color scheme. More detailed discussions of the archeological APE and associated research design for the Phase 1B survey are presented in Section 2.1. The implications of the layout revisions for the Final Project Layout are discussed in Section 4.2.

### **1.3 PREVIOUS ARCHEOLOGICAL WORK**

JMA previously prepared a report entitled *Phase 1A Cultural Resources Survey: Marble River Wind Farm, Towns of Clinton and Ellenburg, Clinton County, New York* (JMA 2006a), which was submitted to OPRHP for review and comment on February 28, 2006. The Phase 1A report summarized the results of background research and identified previously recorded archeological sites and historic properties located in the vicinity of the Project. No previously recorded archeological sites were identified within the APE for the Project.

Personnel from JMA, ESS Group, Inc., and Marble River, LLC also discussed the Project with OPRHP staff during a meeting on January 17, 2006. Many of the issues and recommendations that were raised during this meeting were addressed in the previously prepared research design for the Project entitled *Marble River Wind Farm, Clinton County, New York: Phase 1B Archeological Survey & Historic Architectural Survey Work Plan* (JMA 2006b), which was submitted to OPRHP for review and comment on April 5, 2006. OPRHP indicated their acceptance and approval of the research design presented in the *Phase 1B Archeological Survey Work Plan* in correspondence dated April 17, 2006.

The SHPO *Guidelines* (OPRHP 2006) prescribe a specialized approach for archeological surveys for wind projects in New York. This approach consists of identifying environmental zones within the project area following the approach detailed in Robert Funk's 1993 study entitled *Archeological Investigations in the Upper Susquehanna Valley, New York State*. Following the identification and designation of these environmental zones, the SHPO *Guidelines* request that the cultural resources consultant devise a program of archeological sampling that provides for intensive sampling of each type of environmental zone represented within the Project Area. The methods and rationale that JMA used to apply Funk's 1993 environmental zones model to the Marble River Wind Farm Project Area were presented in the *Phase 1B Archeological Survey Work Plan* (JMA 2006b) previously prepared for the project. Section 2.2 in the present report includes a summary description of the research design presented in the *Phase 1B Archeological Survey Work Plan*.

### **1.4 PROJECT PERSONNEL**

Principal JMA personnel involved in the Phase 1B archeological survey included Dr. Joel Klein, RPA (Senior Project Manager), Patrick Heaton, RPA (Principal Archeologist), Geraldine Baldwin, RPA, and Al Smith (Project Archeologists). The archeological field crew included Sarah Castle-Hackett, Jessica Clermont, Scott Cober, Lorie LaLiberte, Nicole Thorn, Mark Volcko, and Patrick Zingerella (Field Assistants). Patrick Heaton and Geraldine Baldwin conducted the artifact analysis for the report. Dr. William Chadwick and Matt Harris provided assistance with the GIS data and mapping for the Project. Sarah Ruch supervised the preparation of graphics for the report. All supporting information for the Project is on file at JMA's office in Croton-on-Hudson, New York.

## 2.0 PHASE 1B ARCHEOLOGICAL SURVEY RESEARCH DESIGN AND METHODS

### 2.1 ARCHEOLOGICAL AREA OF POTENTIAL EFFECT (APE) AND LEVEL OF EFFORT (LOE)

In the *Phase 1B Archeological Survey Work Plan* (JMA 2006b), JMA proposed that the appropriate methodology and level of effort (LOE) for the Phase 1B survey would include a combination of pedestrian surface survey in cultivated areas and the excavation of shovel tests in wooded or idle areas. During preparation of the *Phase 1B Archeological Survey Work Plan*, JMA conducted a detailed examination of Digital Ortho Quadrangle Quarters (DOQQs), downloaded from the New York State GIS Clearinghouse, to identify existing conditions within the Project Area. Portions of the Project Area were identified as actively cultivated areas and wooded and/or idle areas, for the purpose of determining the appropriate archeological survey methods (i.e., pedestrian surface survey or shovel testing) to be used for the Project. The orthophotography used for this examination was taken in 2003.

At the start of the Phase 1B survey fieldwork in May 2006, JMA conducted a thorough reconnaissance of the Project Area to verify that the methodology and LOE proposed in the *Phase 1B Archeological Survey Work Plan* (JMA 2006b:3) was appropriate. During the reconnaissance it became apparent that many of the areas that had been identified as “open fields” based on aerial photography were planted in hay, clover, and/or alfalfa, resulting in limited or negligible surface visibility, and that pedestrian surface survey (as had been proposed in the *Phase 1B Archeological Survey Work Plan*) would not be possible or appropriate in many of these areas.

Based on the results of the field reconnaissance, JMA modified the LOE to provide for shovel testing within hayfields that had been previously assumed to be suitable for pedestrian surface survey. The revised level of effort for the Phase 1B survey resulted in a research design calling for the excavation of 3,878 shovel tests (equivalent to approximately 242 acres) and pedestrian surface survey of approximately 25 acres (Table 1).

**Table 1. Revised Phase 1B Archeological Survey APE (revised from JMA 2006b:3).**

Proposed Level of Effort (LOE)	Archeological APE	Cultivated Fields - Surface Survey LOE	Woods & Hayfields	Shovel Testing LOE
<i>Phase 1B Archeological Survey Work Plan</i> LOE (JMA 2006b:3)	268 acres	91.5 acres	176.5 acres	2,824 shovel tests
Revised Phase 1B LOE (Based on Field Reconnaissance)	267.1 acres	24.7 acres	242.4 acres	3,878 shovel tests

Changes in the archeological APE that resulted from Project layout revisions that were made subsequent to the Phase 1B survey (see Figure 2) are discussed in Section 4.2.

### 2.2 GIS-BASED LANDSCAPE CLASSIFICATION MODEL

JMA’s (2006b) *Phase 1B Archeological Survey Work Plan* included a GIS-Based landscape classification analysis for the Project Area that defined the locations and limits of local habitat zones and determine their distribution relative to the proposed Project layout. The Project GIS model is based on the landscape classification model presented in Robert Funk’s (1993:70–71) study entitled *Archeological Investigations in the Upper Susquehanna Valley, New York State*, which divides the landscape into three environmental zones, which are “valley floor”, “valley walls”, and “interfluves” (uplands). The vast majority of the Project Area is located within Funk’s “valley floor” environmental zone, while a small section in the southern portion of the Project Area is located in the valley wall environmental zone. Funk’s classification further divides environmental zones into “local habitats” based on landform types, elements, and hydrologic conditions. The result of the landscape classification analysis is presented in Table 2 and displayed in Figure 3. Table 2 presents the total archeological APE for the Project sub-divided amongst the various local habitats identified within the Project GIS model. The analysis presented in Table 2 provided the research design for the Phase 1B Archeological Survey.

**Table 2. Phase 1B Archeological Survey Research Design (revised from JMA 2006b:7-8).**

Landscape Classification Local Habitats	Phase 1B Layout Archeological APE	Cultivated Fields - Surface Survey LOE	Woods & Hayfields	Shovel Testing LOE
1b. outwash plain (no associated water)	135.2 acres	6.4 acres	128.8 acres	2061 shovel tests
1a. outwash plain near stream	20.4 acres	0.1 acres	20.3 acres	325 shovel tests
9a. outwash plain near wetland	27.9 acres	-	27.9 acres	446 shovel tests
10. outwash plain near lake	0.6 acre	-	0.6 acre	9 shovel tests
2b. kame	-	-	-	-
9b. kame near wetland	-	-	-	-
5b. moraine (no associated water)	2.5 acres	-	2.5 acres	40 shovel tests
9f. moraine near wetland	3.7 acres	-	3.7 acres	59 shovel tests
5a. moraine near stream or lake	-	-	-	-
8b. knoll, ridge, or beach (no associated water)	21.9 acres	1.7 acres	20.2 acres	323 shovel tests
8a. knoll, ridge, or beach near lake or stream	1 acre	-	1.0 acre	16 shovel tests
9d. knoll or ridge near wetland	3.4 acres	0.15 acres	3.25 acres	52 shovel tests
9e. lucastrine beach near wetland	-	-	-	-
1. valley wall - outwash head	25.6 acres	4.85 acres	20.75 acres	332 shovel tests
13. steep slopes (>12% slopes)	1.9 acres	-	1.9 acres	31 shovel tests
<i>undetermined</i> (see below)	23 acres	11.5 acres	11.5 acres	184 shovel tests
<b>Phase 1B Research Design Total</b>	<b>267.1 acres</b>	<b>24.7 acres</b>	<b>242.4 acres</b>	<b>3,878 shovel tests</b>

The locations for proposed temporary storage areas, staging areas, and a maintenance building had not been determined at the time that the Phase 1B archeological survey was conducted. As a result, the estimated APE for these areas (approximately 23 acres) was not included in the landscape classification analysis. In the *Phase 1B Archeological Survey Work Plan*, JMA (2006b:4) proposed that 11.5 acres of pedestrian surface survey and the excavation of 184 shovel tests would be conducted for these areas. The LOE necessary to account for these areas was applied to other areas during the Phase 1B survey at the judgmental discretion of JMA's Principal Archeologist and/or Project Archeologist.

## 2.3 ARCHEOLOGICAL SURVEY METHODS

The fieldwork for the Phase 1B Archeological Survey was conducted in May and June 2006. All archeological survey work was conducted under the direction of a Registered Professional Archeologist (RPA). The archeological survey approach for wind projects detailed in the SHPO *Guidelines* (OPRHP 2006) provides for intensive testing (i.e., the excavation of shovel tests at a 5-meter interval) within limited sample areas distributed among various portions of the Project Area. The assumption underlying this approach is that upland areas suitable for wind power development are likely to include small and ephemeral (prehistoric) archeological sites (such as lithic scatters and camp sites) that are unlikely to be identified using standard (i.e., shovel testing at a 15-meter interval) archeological survey techniques.

JMA's Principal Archeologist and/or Project Archeologist selected areas for intensive archeological survey within the Project Area based on the distribution of the archeological APE within the various environmental zones within the Project Area determined by the research design (see Table 2); and, judgmental field evaluations of archeological sensitivity by the Principal Archeologist and/or Project Archeologist during the Phase 1B survey work. Representative photographs were taken to document the environmental setting, context, and existing conditions at each archeological survey area (see Photographs 1-14).

The Phase 1B fieldwork included two principal methods of archeological survey: pedestrian surface survey and the excavation of shovel tests. In agricultural fields where pedestrian surface survey was conducted, JMA field personnel closely examined the ground surface while walking parallel transects spaced at approximately 3-5 meter intervals (Photographs 1-2). The locations of all artifacts identified in surface survey areas were recorded with a GPS point. In wooded, idle, and hayfield areas, JMA personnel excavated shovel tests in a pattern of close-interval testing (5-meter spacing) to provide for intensive survey of selected sample areas within the APE.

- At proposed wind turbine generator (WTG) locations where subsurface testing was conducted, JMA field personnel excavated 49 shovel tests in a grid pattern of seven parallel transects (oriented east-to-west) each with seven shovel tests, all spaced at a 5-meter interval, centered on the proposed WTG location (Photographs 3-4; see Appendix A: Map 1 for typical grid pattern layout at WTG locations).
- Along proposed access road/interconnect routes where subsurface testing was conducted, JMA field personnel excavated two parallel transects (5 meters apart) of shovel tests spaced at 5-meter intervals (Photographs 5-6). These two parallel transects were each designated with odd-numbered and even-numbered shovel tests within a single archeological survey area.

The location of all subsurface tests were recorded with a GPS point and sketched on field maps. The locations of all archeological survey areas and shovel test units are depicted in Appendix A: Archeological Survey Area Maps. Throughout the archeological testing, field activities were photographed, and field notes recorded the methods and results of all testing. Notes and a soil profile for each shovel test were recorded on pre-printed standardized forms (see Appendix B: Shovel Test Stratigraphic Profiles). Soil excavated from shovel-test units was passed through one-quarter inch hardware cloth to ensure uniform recovery of cultural materials. Recovered artifacts were placed in bags marked with standard provenience information and returned to JMA's laboratory for processing. A complete listing of all recovered artifacts is included as Appendix C: Artifact Inventory. The following field procedures were followed when possible cultural materials were identified:

- The underlying bedrock materials across the Project Area are quartzite and sandstone formations. JMA personnel examined numerous broken fragments and chunks of sandstone and quartzite during the course of the field survey that represented plow shatter and/or frost cleaves. In a few instances, it was difficult to positively determine whether some quartzite fragments represented a prehistoric artifact or natural/agricultural breakage. When a questionable fragment was recovered in a shovel test, JMA field personnel excavated 4 radial shovel tests to see if lithic artifacts were present in the immediate vicinity. If no artifacts were recovered in the radial shovel tests, then the original questionable fragment was concluded to be natural and/or agricultural, and discarded.
- If historic-period artifacts were recovered in a shovel test, then JMA field personnel examined the surrounding vicinity for foundation remains or other evidence of a structure (e.g., landscape alterations or common perennial yard plantings) to determine if the artifacts were associated with a nearby site. Small fragments of ceramic, glass, and metal hardware are ubiquitous in agricultural areas as field scatter associated with manuring or other agricultural practices. Historical field scatter is generally not significant because it cannot be associated with a specific household and lacks any meaningful interpretive context. Radial shovel tests were only excavated if JMA's Principal Archeologist or Project Archeologist determined that the original shovel test was in area of possible historic-archeological sensitivity (e.g., proximity to an observed foundation, map-documented structure, or nearby road).

As a component of the Phase 1B survey, JMA field personnel also investigated the locations of map-documented structures (MDSs) that are depicted on historic maps and atlases within the Project Area. Historic cartographic sources reviewed for the survey included the 1856 Ligowski *Map of Clinton County*, the 1869 Beers *Atlas of Clinton County*, the 1915 USGS *Churubusco, N.Y.* 15-minute topographic quadrangle, and the 1964 USGS *Churubusco, N.Y.* 7.5-minute topographic quadrangle. Details of these maps were included in the *Phase 1A* report for the Project (JMA 2006a) and are not reproduced herein. Documentation of these sites included photography, sketch maps, and GPS points. The locations of these sites were provided to ESS and Marble River, LLC so that these areas could be avoided in the event that any future revisions of the Project layout are necessary. OPRHP Archeological Site Inventory Forms for these sites are included in Appendix D.

### 3.0 PHASE 1B ARCHEOLOGICAL SURVEY RESULTS

#### 3.1 ARCHEOLOGICAL SURVEY AREAS

Archeological survey areas (Figure 2; see Appendix A) included a sample of proposed wind turbine generator (WTG) locations, proposed access road routes, and proposed electrical interconnect routes. Each area selected for archeological survey (either shovel testing or pedestrian surface survey) was designated with an arbitrary Archeological Survey Area identifier consisting of a letter and number (e.g., A1). Shovel tests within areas selected for subsurface testing were designated with the Archeological Survey Area identifier followed by a sequential number (e.g. shovel tests A1.01, A1.02, and A1.03). Artifacts recovered from pedestrian surface survey areas were labeled with the Archeological Survey Area identifier (e.g. A27) followed by a sequential number, so that surface finds A27.01, A27.02, and A27.03 represent surface finds collected within Archeological Survey Area A27.

The location and LOE conducted within landscape classification local habitats for each Archeological Survey Area are summarized in Table 3 (shovel tested areas) and Table 4 (pedestrian surface survey areas). The locations of all Archeological Survey Areas and shovel tests are depicted in Appendix A. Stratigraphic profiles for all shovel tests are included in Appendix B. A complete inventory of recovered artifacts is included in Appendix C. Representative photographs of the landscapes and settings of Archeological Survey Areas are included as Photographs 1-14.

### 3.2 ARCHEOLOGICAL SURVEY RESULTS

In total, the Phase 1B survey fieldwork included the excavation of 3,912 shovel tests (equivalent to 244.5 acres) and pedestrian surface survey of approximately 84 acres. The total LOE expended during the survey fieldwork (equivalent to an approximately 328.5-acre APE) satisfies the Phase 1B Research Design LOE (of 268 acres) proposed in the *Work Plan* (see Section 2.1). The additional work included the excavation of “radial” shovel tests around shovel tests where artifacts were recovered (to verify the existence of archeological sites as opposed to isolated artifacts) and pedestrian surface survey of field areas adjacent to the construction footprint of proposed Project components.

The Phase 1B archeological survey resulted in the recovery of 47 artifacts, which are listed in Appendices B and C and summarized in Table 5. Most of the finds were historic-period artifacts recovered from the plowzone contexts, which typically represent field scatter (e.g., small fragments of ceramic, glass, and metal hardware). Field scatter is often the result of nineteenth-and-twentieth-century manuring or other agricultural practices, and is generally not considered significant because such finds lack any meaningful interpretive context.

**Table 5. Artifacts Recovered during the Phase 1B Archeological Survey.**

JMA Archeological Survey Area & Appendix A Map Key	Shovel Test or Surface Find	Artifacts Recovered
Archeological Survey Area A13 Appendix A: Map 17	A13.60, Stratum 1 (0-31 cm) A13.62, Stratum 1 (0-44 cm) A13.66, Stratum 1 (0-30 cm) A13.71, Stratum 1 (0-25 cm) A13.74, Stratum 1 (0-31 cm)	1 Cut/Wrought Nail 1 Barbed Wire Fragment (post-1886) 1 Graphite Pencil Fragment (post-1875) 1 Cut/Wrought Nail 1 Olive Green Glass Bottle Fragment
Archeological Survey Area A21 Appendix A: Map 26	A21.29, Stratum 1 (0-26 cm)	1 (possible) Quartzite Cobble Tool/Chopper
Archeological Survey Area A22 Appendix A: Map 26	A22.51, Stratum 2 (21-33 cm) A22.69, Stratum 1 (0-25 cm)	1 Clear (colorless) Glass Bottle Fragment 1 Plastic Pipe Stem (post-1915)
Archeological Survey Area A27 Appendix A: Map 20	A27.1-4 (Surface Finds)	2 Plain Whiteware Sherds (post-1810) 1 Window Glass Fragment 1 Amethyst Glass Bottle Fragment (ca. 1880-1915)
Archeological Survey Area A28 Appendix A: Map 23	A28.1-5 (Surface Finds)	2 Plain White Ironstone Sherds (ca. 1813-1900) 1 Brown Stoneware Sherd (post-1810) 1 Amethyst Glass Bottle Fragment (ca. 1880-1915) 1 Medicine Bottle Fragment (neck/lip) 2 Clear (colorless) Glass Bottle Fragments
Archeological Survey Area A30 Appendix A: Map 27	A30.1-7 (Surface Finds)	2 Gray Salt-Glaze Stoneware Sherds (post-1810) 3 Plain Whiteware Sherds (post-1810) 2 Clear (colorless) Glass Bottle Fragments 1 Olive Green Glass Bottle Fragment
Archeological Survey Area A33 Appendix A: Map 28	A33.1 (Surface Find)	1 Plain White Ironstone Sherd (ca. 1813-1900)
Archeological Survey Area B8 Appendix A: Map 14	B8.39, Stratum 1 (0-23 cm)	1 Plow/Harrow Tooth
Archeological Survey Area B9 Appendix A: Map 14	B9.80, Stratum 2 (4-24 cm) B9.109, Stratum 1 (0-22 cm) B9.156, Stratum 2 (16-28 cm) B9.156, Stratum 3 (28-41 cm)	1 Cut/Wrought Nail 1 Green Glass Bottle Fragment (burnt/melted) 1 Cut/Wrought Nail 1 Cut/Wrought Nail
Archeological Survey Area B26 Appendix A: Map 9	B26.01-B26.88	Merchia Road Historic Site (see Section 3.3, Table 8)
Archeological Survey Area B28 Appendix A: Map 16	B28.1-6 (Surface Finds)	4 Clear (colorless) Glass Bottle Fragments 2 Plain White Ironstone Sherds (ca. 1813-1900) 1 Aqua Flat Glass Fragment
Archeological Survey Area C4 Appendix A: Map 33	C4.4, Stratum 2 (10-20 cm)	1 Olive Green Glass Bottle Fragment
Archeological Survey Area C5 Appendix A: Map 7	C5.19, Stratum 3 (30-47 cm)	1 (possible) Quartzite Cobble Tool/Chopper
Archeological Survey Area C8 Appendix A: Map 2	C8.9, Stratum 1 (0-9 cm)	1 Amber Glass Bottle Fragment

Only two objects that could possibly represent Native American prehistoric artifacts were recovered during the Phase 1B survey. These objects are broken or battered quartzite cobbles, recovered from shovel tests A21.29 and C5.19 (Photograph 15). Both of these objects are fragments of the native quartzite/sandstone bedrock that is ubiquitous throughout the Project Area. Both quartzite cobbles exhibit scarring along one edge that resembles scarring resulting from intentional flake-removal for the purpose of creating a sharp edge. However, both of these cobbles are also extremely weathered and the apparently-flaked edges quite dulled. Additional radial shovel tests were excavated at each of these locations to determine if other possible lithic artifacts were present in the vicinity of these finds.

Shovel test A21.29 was located along the western perimeter of a grid of 49 shovel tests excavated at a proposed wind turbine generator location (Appendix A: Map 26). The quartzite cobble was recovered from within the plowzone stratum at this location. JMA field personnel excavated a total of eight additional radial shovel tests, including 4 tests at one-meter intervals from A21.29 (e.g., A21.29.1E) and four tests at three-meter intervals from A21.29 (e.g., A21.29.3E). No other possible artifacts were recovered in these radial shovel tests or in any of the other shovel tests excavated at Archeological Survey Area A21.

Shovel test C5.19 was located within a grid of 49 shovel tests excavated at a proposed wind turbine generator location (Appendix A: Map 7), situated on one of the few sandy areas identified within the Project Area. The possible chopper was recovered from a relatively deeper context of sandy loam with gravel at 30-47 cm below ground surface (bgs). JMA field personnel excavated four additional shovel tests at 2.5-meter intervals around C5.19 (shovel tests C5.19E, C5.19N, C5.19W, and C5.19S). No other possible artifacts were recovered in these radial shovel tests or in any of the other shovel tests excavated at Archeological Survey Area C5.

No additional (and/or more convincing) cultural materials were recovered in the vicinity of shovel tests A21.29 or C5.19. JMA's Principal and Project Archeologists determined that the broken and battered cobbles are likely the product of natural or inadvertent activities or processes such as glacial action, freeze-fracture, or plow-shatter. It is the opinion of JMA that these finds are not evidence of archeological deposits.

No Native American prehistoric sites were identified within the Project Area during the Phase 1B archeological survey. It is therefore difficult to apply the results of the Marble River Wind Farm Phase 1B survey to evaluate the utility of the GIS-based landscape classification model in terms of either Native American settlement patterns or utility as a predictive model for archeological survey. Table 6 presents a summary of the Phase 1B archeological survey work conducted within each of the landscape classification local habitats identified in the research design (see Section 2.2; Figure 3). A detailed accounting of the numbers of shovel tests excavated and acreage of pedestrian surface survey within each local habitat conducted within each of JMA's archeological survey areas is provided in Tables 3 and 4. Table 6 also provides a comparison between the acreage actually surveyed during the Phase 1B survey within each local habitat and the LOE proposed within each local habitat in the research design. Table 7 provides a comparison between the total acreage and relative amount of the total Project Area within each local habitat; the acreage and relative amount of the Phase 1B research design archeological APE within each local habitat; and the acreage and relative amount of areas within each local habitat that were surveyed during the Phase 1B fieldwork.

**Table 6. Summary of Phase 1B Level of Effort (LOE) within Landscape Classification Local Habitats.**

Landscape Classification Local Habitats	Phase 1B Research Design APE (Acres)	# of Shovel Tests Excavated	Equivalent Acreage (16 shovel Tests/acre)	Surface Survey Areas (Acres)	Total Phase 1B Survey LOE (Acres)	% Complete Relative to Research Design

<b>Totals:</b>	<b>19,392.5</b>	<b>100%</b>	<b>267.1</b>	<b>100%</b>	<b>328.5</b>	<b>100%</b>

The majority of the Marble River Wind Farm Project Area lies within areas classified as outwash plain. These areas occur along the relatively level upland table of Potsdam sandstone bedrock that extends along the Churubusco Plateau north from the Adirondack uplands. In total, outwash plain areas (i.e., *local habitats 1b, 1a, 9a, and 10*) comprise 84% (or 16,313.1 acres) of the Project Area (see Table 7). Approximately 69% of the Phase 1B research design APE (or 184.1 acres of 267.1 acres) was located within outwash plain areas, and correspondingly 64% of the Phase 1B survey LOE (this included the excavation of 2,608 shovel tests and pedestrian surface survey of 47.5 acres) was expended in outwash plain areas. The vast majority of proposed disturbance and survey effort was located within *local habitat 1b: outwash plain (no associated water)*. Areas within this environmental zone were generally level areas away from water with little topographic relief. In general these areas were somewhat poorly drained with thin silt loam soils overlying till and/or scoured and fractured sandstone.

Approximately 683.1 acres within the Project Area (or 3.5% of the Project Area) occupy glacial moraine features (Table 7). These ridges occur within the northern portion of the Project Area and generally are oriented east-to-west. The Phase 1B research design APE included 6.2 acres (combined) of areas within *local habitat 5b: moraine (no associated water)* and *local habitat 9f: moraine near wetland* (Table 6). JMA personnel excavated 257 shovel tests in these areas, or 250% of the necessary level of effort required by the research design (Table 7), because JMA's Principal and Project Archeologists judged that there was a relatively greater likelihood for prehistoric archeological sites to be located on these elevated, well-drained glacial landforms than in most of the other environments located within the Project Area. No such sites were identified within the moraine landform areas.

Areas identified in the landscape classification model as knolls comprise 1,369.4 acres (or 7%) of the Project Area. This landscape classification includes areas within *local habitat 8b: knoll, ridge, or lacustrine beach (no associated water)*, *local habitat 8a: knoll, ridge, or lacustrine beach near lake or stream*, and *local habitat 9d: knoll or ridge near wetland* (Table 7). During the preparation of the digital landscape classification model, JMA geoarcheologists assumed that the vast majority of "knolls" within the Project Area were a variety of glacial features marked by low elevation gains above the surrounding flat outwash plain. Knoll features were identified in the digital landscape model by segregating areas that were greater than two meters above the surrounding local elevation and greater than 40 meters in radius (JMA 2006b:6). JMA field personnel excavated a total of 678 shovel tests and conducted pedestrian surface survey of approximately 5.7 acres within *local habitats 8b, 8a, and 9d* for a total Phase 1B survey LOE in knoll areas of 48.1 acres. This effort was equivalent to approximately 183% of the 26.3 acres of Phase 1B research design APE identified for knoll areas (Table 6).

Similar to the moraine features, JMA archeologists assumed that there would be a relatively greater likelihood for prehistoric archeological sites to be located on elevated "knoll" landforms than in most of the other environments located within the Project Area. The results of shovel testing on knolls during the Phase 1B survey indicated that the assumption in the research design that these prominences represented glacial landforms was for the most part erroneous. Soil stratigraphy observed in most of the knoll areas consisted of thin silt loam soils overlying fractured and/or scoured sandstone bedrock. Most of the "knoll" areas investigated during the Phase 1B survey are outcrops or undulations in the bedrock. These bedrock-controlled landforms generally lacked the well-drained, sandy soils characteristic of glacially derived knoll features.

The southern portion of the Project Area occupies the gentle-relief, north-facing slopes that represent the base of the Adirondack uplands. This area was classified as the valley wall environmental zone (see Funk 1993) and designated *local habitat 1: outwash heads*. These areas include 778.1 acres (or 4%) of the Project Area. In general, the outwash head areas are distinguishable from the outwash plain by an abrupt change in profile, slope, and elevation (JMA 2006b:7). JMA field personnel excavated a total of 334 shovel tests and conducted pedestrian surface survey of approximately 30 acres within *local habitat 1: outwash heads* for a total Phase 1B survey LOE in this area of 51 acres. This effort was equivalent to approximately 200% of the 25.6 acres of Phase 1B research design APE identified for valley wall areas (Table 6).

The Phase 1B research design archeological APE (Section 2.2; Tables 2 and 6) included only 1.9 acres within *local habitat 13: steep slopes (>12% slopes)*. These areas are generally isolated areas where a linear Project component traverses a sloped area or incidental areas where the footprint for a wind turbine located on an elevated landform subsumes sloped areas along the edges. Many of the sloped areas (particularly within the southern *outwash heads* portion of the Project Area) are coterminous with hydrologic features and represent incised stream channels within areas of exposed bedrock outcrop. Outcrops within the Project Area are generally tabular areas of scoured, exposed bedrock or incised areas where stream channels flow through fissures between slabs of sandstone. No ledges, overhands, or glacial erratics suitable for use as rockshelters were identified within the Project Area. Similarly, no outcrops of siliceous stone suitable for use in the production of stone tools were identified within the Project Area.

### 3.3 ARCHEOLOGICAL SITES

JMA field personnel identified and documented 13 historic-archeological sites located within the Project Area (Figure 4). These sites include the former route of the abandoned Ogdensburgh & Lake Champlain Railroad, the remains of the map-documented lumber mills and company town at Clinton Mills, and foundation remains of structures (mostly farmhouses) that are depicted on historic maps of the area, including the 1856 Ligowski *Map of Clinton County*, the 1869 Beers *Atlas of Clinton County*, and the 1915 USGS topographic survey. Documentation of the archeological sites identified during the Phase 1B survey included photography, sketch maps, and GPS points. Appendix D: OPRHP Archeological Site Inventory Forms includes documentation, location maps, and photographs depicting existing conditions for all of the archeological sites identified during the Phase 1B survey.

**Ogdensburgh & Lake Champlain Rail Road** (Appendix D: OPRHP Site A01907.000089; Appendix A: Maps 31-32). The construction of the Ogdensburgh & Lake Champlain Rail Road (O&LCRR) in 1853 provided for the efficient transportation of local lumber products to distant markets (Hurd 1880:301). Stations on the railroad near the Project Area (see JMA 2006a) included Ellenburg Depot, Clinton Mills, and Churubusco (or the Summit Depot). The former route of the O&LCRR is presently represented by a dirt and crushed-stone road running atop the remnant railroad berm. The dirt road is approximately 20 feet wide in most places, is not maintained, and is used primarily for recreational purposes including fishing and hunting access, ATVs, and snowmobiles. The portion of the former route of the railroad that extends east from Churubusco to Bombard Road in Ellenburg is an intact and readily apparent historic landscape feature (Photographs 16-18).

**The Clinton Mills Historic Site** (Appendix D: OPRHP Site A01907.000088; Appendix A: Map 31). Clinton Mills is the site of a ca. 1860s-1930s lumber mill and company town located approximately two miles east of Churubusco, along the English River and former route of the Ogdensburgh & Lake Champlain Railroad. The former hamlet is now represented by only a few standing structures. The original layout of buildings at Clinton Mills is depicted on the 1869 Beers atlas (see JMA 2006a; Appendix A: Map 31). The industrial complex and “company town” included a millpond, steam-powered sawmill, planing mill, blacksmith shop, railroad depot, company store, boarding houses, and a school. In 1865, R.W. Adams & Co. commenced lumber mill operations at the site. R.W. Adams was a New York City capitalist who owned approximately 13,000 acres of timberland in the region and operated lumberyards at the Atlantic Yards in Brooklyn. Firms that operated the mills included R.W. Adams & Co., Adams, Lee, & Co., and Adams & Sons. The mills processed an estimated 80,000 logs per year resulting in approximately 8,000,000 feet of lumber sent to market each year (TCHS 1976).

In May 1877 the mills and most of the residences in Clinton Mills burned to the ground in a conflagration that resulted from a forest fire. At that time, there were 64 families that lived and worked at Clinton Mills:

Clinton Mills had previous to the fire grown to be a promising village of about 400 inhabitants, mostly in the employ of R.W. Adams & Co. It was nicely laid out. Most of the houses, of which there were nearly 50, were neat frame buildings, many of them owned by their occupants, and well furnished. The signs of general prosperity and thrift were universal... There was a handsome school edifice, used also for a church, with a daily school attendance of 50 pupils. The steam-mills were said to be the largest and best on the line of the Ogdensburgh [sic] road [railroad], and they were run by two 80 horse-power engines. Their store was claimed to be the largest in Clinton County, and was well stocked with all lines of goods. But where all was so prosperous and promising only two frame houses, and a couple of barns remained after the fire. The loss was \$300,000, partially insured (Hurd 1880:303).

The works at Clinton Mills were never fully rebuilt to their pre-1877 extents. Historical sources describe another fire in 1888 at the rebuilt Clinton Mills, which resulted in considerably less damage. Clinton Mills continued as a railroad stop on the Ogdensburgh & Lake Champlain until 1931 (TCHS 1976).

Extant features at the site observed during the Phase 1B archeological survey (Photographs 17, 19-21) include the former O&LCRR berm (now a dirt road), the foundation remains of the mill, the dam and mill pond along the English River, and a standing structure (an occupied residence) that likely is the former boardinghouse identified on the 1869 Beers atlas.

**The Merchia Road Historic Site** (Appendix D: OPRHP Site A01907.000081; Appendix A: Map 9). This site consists of foundation remains from an abandoned farmstead located approximately 220 feet north of Merchia Road, approximately 4,750 feet west of Jones Road. The “F. Sampica” residence is depicted in the general vicinity of the site on the 1869 Beers atlas and a structure (unidentified) is depicted at the location of the site on the 1915 USGS survey. No structures are depicted in the vicinity of the site on the 1856 Ligowski map or 1964 USGS survey.

JMA field personnel identified the site while conducting archeological survey in the vicinity of the proposed location of Phase 1B Layout WTG 172 (Appendix A: Map 9). Archeological work conducted at the site included brush clearing to identify and delineate extant foundation remains, examination and documentation of artifacts dumped in and around the foundation remains, and the excavation of shovel tests in a close interval (5-meter) grid pattern. Extant, aboveground features at the site (Photographs 22-24) include a 16-foot-by-24-foot fieldstone cellar hole, a 5-foot-diameter stone-lined well located south of the cellar hole, a 40-foot-by-65-foot barn foundation, and a second 7-foot-diameter stone-lined well at the southwest corner of the barn foundation. Slightly raised, hummocky areas with disarticulated fieldstone located around the cellar hole suggest that the former structure may have additions or porches that extended north and west of the main house foundation. The entire site area was overgrown with dense vegetation, but the former yard area surrounding the house foundation (cellar hole) is defined by tall shade trees along the northern and eastern sides of the yard.

JMA excavated 88 shovel tests (B26.01-88) in a grid pattern at 5-meter intervals across the yard area surrounding the cellar hole. In total, 38 artifacts were recovered from 12 shovel tests (see Table 8). Soils in this area consisted of 10YR 2/1 black, 10YR 3/1 very dark gray, or 10YR 3/3 very dark brown silt loam that extended in depth to between 14 to 36 cm below ground surface (bgs) underlain by 10YR 3/6 to 4/6 dark yellowish brown, 7.5YR 4/4 brown, or 10YR 6/2 light brownish gray silt loam (Appendix B). All of the artifacts recovered from shovel tests were from within the uppermost soil stratum and generally recovered from the upper 10 cm within each shovel test. Soils across the site were uniformly rocky with gravel, cobbles, and fragments of sandstone bedrock. Soils were also saturated across the site, with groundwater being encountered in most of the shovel tests. The fact that the cellar hole was also filled with standing water provides further indication that the soils in the vicinity are poorly drained.

**Table 8. Artifacts Recovered from the Merchia Road Historic Site (OPRHP Site A01907.000081).**

Shovel Test/Context	Stratum	Depth	Artifacts Recovered
B26.1	1	0-32 cm	1 Ironstone/Hotelware Sherd (ca. 1900s)
B26.8	1	0-14 cm	1 Aqua Glass Bottle Fragment
B26.10	1	0-16 cm	1 Clear (White) Glass Bottle Fragment
B26.18	1	0-19 cm	1 Brown Stoneware Sherd (post-1810); 1 Plain White Ironstone Sherd (ca. 1813-1900); 5 Window Glass Fragments
B26.19	1	0-22 cm	1 Cut/Wrought Nail; 8 Scraps of Leather: Shoe Parts (Discarded)
B26.20	1	0-24 cm	7 Plain Whiteware Sherds (post-1810)
B26.32	1	0-23 cm	1 Aqua Glass Bottle Fragment
B26.37	1	0-14 cm	1 Clear (White) Glass Bottle Fragment
B26.47	1	0-22 cm	3 Plain White Ironstone Sherds (ca. 1813-1900)
B26.48	1	0-33 cm	1 Rockingham Yellowware Sherd (ca. 1840-1910)
B26.49	1	0-36 cm	1 Brown Stoneware Sherd (post-1810); 1 Plain Whiteware Sherd (post-1810); 3 Unidentified Metal Fragments (Discarded)
B26.80	1	0-8 cm	1 Plain White Ironstone Sherd (ca. 1813-1900)
Cellar Hole	Surface Finds	-	1 Amber Medicine Bottle: "WHITEHALL" (post-1954); 1 Clear (White) Medicine Bottle: "Rexall/PHARMACY" (post-1920); 1 Metal Can: Shurfine Orange Juice (post-1948)

The artifacts recovered from shovel tests at the Merchia Road Historic Site included a variety of ceramic and glass fragments from domestic vessels that are typical for the early-to-middle-twentieth century. JMA field personnel also examined the scatter of household rubbish that was strewn across, within, and around the water-filled cellar hole. This rubbish was primarily glass bottles and metal cans, and included brown/amber glass “CRISCO” vegetable oil bottle (post-1960), a five-gallon steel gasoline can, a one-gallon plastic “CLOROX” bottle, and a clear/colorless glass “WESSON OIL” bottle. The presence of an oxidized and partially corroded New York State license plate stamped “1964” within this assemblage provides a general date soon after which the site was likely abandoned.

**The Wilkins Road Historic Site** (Appendix D: OPRHP Site A01907.000087; Appendix A: Map 5). The site includes foundation remains of a house, well, and barn located on the east side of a private logging road, approximately 2 miles north of Clinton Mills Road. A structure is depicted at this location on the 1915 USGS survey. No structures are depicted in this area on nineteenth-century maps, nor on the 1964 USGS survey. Features documented at the site (Photographs 25-26) include a 15-foot diameter depression lined and filled with loose, disarticulated fieldstone (presumed to represent a pushed-in house foundation or cellar hole), a 4-foot diameter stone-lined well, and a 46-foot-by-16-foot fieldstone capped with cement paving barn foundation elevated approximately 1.5 feet above the ground surface. The area surrounding the site has been recently and extensively logged, and most of the ground surface and parts of the barn foundation are covered with slash and timber detritus. The ground surface is heavily rutted from the treads of skidders and logging vehicles. Vegetation immediately surrounding the pushed-in cellar and barn foundations consists of overgrown lilac, hawthorne, and poplars.

**The Saphouse Site** (Appendix D: OPRHP Site A01907.000086; Appendix A: Map 2). This site is located approximately 1,120 feet south of Liberty Pole Road, approximately 2 miles east of NYS Route 189. No structures or other indications of the site are depicted in the vicinity of this location on any known historic maps of the area. The saphouse is a partially collapsed rough-hewn log structure (Photograph 27), which measures approximately 15 feet east-to-west by 18 feet north-to-south. The structure was built with dove-tailed joints at the corners, rests on a shallow sill of dry-laid fieldstone, and lacks evidence of either a cellar or framed floor. The structure is located on the northwestern slope of a small knoll that overlooks wetlands to the north and west. The knoll is covered with a stand of mature sugar maples interspersed with some red maples, beech, birch, and a few cherry trees. Numerous metal vats and metal gallon cans, likely used for boiling and transporting maple syrup, are strewn about the structure.

Twentieth-century rubbish is strewn across the ground surface extending south from the collapsed saphouse. Materials observed in this area included the box-spring for a car or truck seat, “FIRESTONE” rubber automobile tires (post-1903), a metal gallon-jug for “TRAFFIC” motor oil, a metal milking stool, and a grinding wheel. Embossed glass bottles in the rubbish dump include an amber-glass with screw-top gallon-jug for “CLOROX BLEACH” with an Owens Illinois Glass Company mark indicating production ca. 1955, and clear-glass, screw-top bottles for “LESTOIL” and “HEINZ CATSUP”.

In the Phase 1B Layout, WTG 173 was located approximately 165 feet southeast of the collapsed structure. The Final Project Layout relocated WTG 173 so that the proposed turbine will be located 220 feet southwest of the collapsed structure (Appendix A: Map 2). The former saphouse (or sugar shack) will not be affected by the proposed construction of Project components in the vicinity.

**The Boomhower & Humphrey Historic Site** (Appendix D: OPRHP Site A01907.000082; Appendix A: Map 32). A structure labeled “Boomhower & Humphrey” is depicted on the 1869 Beers atlas on the north side of the former route of the Ogdensburgh & Lake Champlain Railroad (O&LCRR), approximately 3500 feet east of Churubusco. Historic sources identify the structure labeled “Boomhower & Humphrey” on the 1869 atlas as the site of a general store. John M. Humphrey is identified in the Hamilton Child *Gazetteer* (1862:75) as a grocer, lawyer, and supervisor in the hamlet of Summit (Churubusco). Hurd’s *History of Clinton & Franklin Counties* states that “the present store [in Churubusco] was built in 1865, and has been occupied by John Humphrey, Humphrey & Boomhower, and in

1879 by Rufus M. Humphrey” (1880:301). The former store building is represented by a shallow cellar hole (approximately 2-feet deep), which measures approximately 11 feet east-to-west by 15 feet north-to-south (Photograph 28). The depression is heavily overgrown with weeds and brambles, however, the interior walls of the depression appear to be lined with a few courses of dry-laid fieldstone. The foundation is located approximately 55 feet north of the former O&LCRR railroad berm (now a dirt road), and approximately 75 feet east of the culverted railroad crossing over an unnamed stream. The surrounding area is heavily overgrown with birch, beech, poplar, and red maple.

**The Durant Historic Site** (Appendix D: OPRHP Site A01907.000079 Appendix A: Map 32). The site is located on the south side of the O&LCRR berm opposite the Boomhower & Humphrey site, approximately 3500 feet east of Churubusco. A structure is depicted at this location on the 1869 Beers atlas, identified as the property or residence of “J. Durant.” The structure is not depicted on any other historic maps of the area. Given the location of the structure opposite the Boomhower & Humphrey store site it is likely that the site also represents a commercial concern, however, JMA did not identify any references to J. Durant in either the 1862 Child *Gazetteer* or 1880 Hurd history. The site is represented by a shallow (approximately 1.5-2 feet deep) depression that may represent a cellar hole (Photograph 29), which measures approximately 10 feet east-to-west by 15 feet north-to-south. The depression appears to have been pushed-in. The interior walls of the depression are roughly defined disarticulated fieldstones. The foundation is located approximately 15 feet south of the railroad berm, and approximately 200 feet east of a culverted railroad crossing over an unnamed stream.

**The Clark Historic Site** (Appendix D: OPRHP Site A01907.000085 Appendix A: Map 33). The site is located in the north side of Robare Pond Road, approximately 600 feet east of NYS Route 189. A structure is depicted at this location on the 1856 map, the 1869 Beers atlas (identified as the property or residence of “Mrs. Clark”), and on the 1915 USGS survey. The site consists of a relatively large, shallow (approximately 3-foot-deep) depression or cellar hole (Photograph 30), which measures approximately 20 feet east-to-west by 30 feet north-to-south. The walls of the depression are defined by course of dry-laid fieldstone interspersed with large boulders of native quartzite (the local bedrock). A low stone foundation extends 15 feet off of the south face of the foundation, which likely represents a former front porch. The foundation is located approximately 40 feet north of Robare Pond Road.

**The Liberty Pole Road Historic Site 1** (Appendix D: OPRHP Site A01907.000077; Appendix A: Map 2). A structure is depicted on the north side of Liberty Pole Road, approximately 1.5 miles east of NYS Route 189, on the 1915 and 1964 USGS surveys. The site consists of a relatively large, well-built house foundation (Photograph 31) with an 8-foot-deep cellar hole that measures approximately 21 feet east-to-west by 26 feet north-to-south, with a 16-foot-by-14-foot kitchen-ell extending off the eastern side. The foundation is constructed of dry-laid, quarried and cut, pinkish-gray native quartzite or sandstone (the local bedrock). The foundation is located approximately 20 feet north of Liberty Pole Road and is lightly overgrown with birch, sumac, and raspberries.

**The Liberty Pole Road Historic Site 2** (Appendix D: OPRHP Site A01907.000078; Appendix A: Map 2). The site is located on the south side of Liberty Pole Road, approximately 1.5 miles east of NYS Route 189. A structure is depicted at this location on the 1915 USGS survey. The site consists of a pushed-in, dry-laid fieldstone house foundation (cellar hole), which measures approximately 26 feet east-to-west by 14 feet north-to-south. The foundation is located approximately 50 feet south of Liberty Pole Road. A large push-pile of disturbed earth obscures the northwest corner of the foundation (Photograph 32). Remnant perennial yard plantings at the site include two large clumps of lilac bushes located along the eastern and southern sides of the foundation.

**The Goka Historic Site** (Appendix D: OPRHP Site A01907.000080; Appendix A: Map 21). The site is located in a hay field on the south side of Gagnier Road, approximately 425 feet west of NYS Route 11. A structure is depicted at this location on the 1856, 1869 (identified as the “J. Goka” residence), 1915, and 1964 maps of the area. No remnants of a structure or foundation are visible at the site. The only visible indication of the former farmstead is a metal pump that marks the location of the well (Photograph 33). An embossed metal plate on the pump reads “PAT<sup>D</sup>

/AUG 1 99/APR 8 01/MAR 7 11”, which indicates that the pump was installed after 1911. Mr. Paul Premo, the owner of the property, indicated that the pump is in the well’s original location. He stated that the house at the site was formerly located approximately 50 feet east of the well, and that a barn was located north of the well between the well and Gagnier Road. He described the former house as a simple timber/log structure with a shallow dug-out crawlspace without a full basement. Mr. Premo recalled that the structure was dismantled and the shallow cellar bull-dozed during the late 1960s or early 1970s.

**The Patnode Road Historic Site 1** (Appendix D: OPRHP Site A01909.000045; Appendix A: Map 25). The site is an abandoned farmstead located in a hay field on the east side of Patnode Road, approximately 1650 feet south of the Ellenburg/Clinton town line. Features observed at the site include a dilapidated and collapsing house, perennial yard plantings, and a fieldstone barn foundation. The dilapidated structure (Photograph 34) is an 18-foot by 24-foot, 1.5-story house constructed of rough-hewn squared-logs with dovetail joins. The structure rests on a dry-laid fieldstone cellar and has a metal-sheeting roof. The remnants of a hearth and chimney were observed within the structure however most of the brick appears to have been salvaged. The former yard area extending south from the structure is overgrown with willow, apple, and other fruit trees. A fieldstone barn foundation (that measures approximately 42-feet-by-32-feet) is located approximately 100-feet south of the collapsing house.

**The Patnode Road Historic Site 2** (Appendix D: OPRHP Site A01909.000046; Appendix A: Map 25). The site consists of a collapsing cabin located in woods on the east side of Patnode Road, approximately 0.5-mile south of the Ellenburg/Clinton town line and approximately 0.5-mile north of Star Road/NYS Route 190. Features observed at the site include a dilapidated and collapsing log house and relic farm lane or driveway. The house remains consist of a collapsing log structure (Photograph 35) with an aluminum-sheeting roof. The single-room structure measures approximately 30-feet-by-40-feet, with only a shallow dug-out basement. No materials were collected from within or adjacent to the structure due to the derelict and potentially hazardous condition of the property.

## 4.0 CONCLUSIONS AND RECOMMENDATIONS

### 4.1 PROJECT EFFECTS ON ARCHEOLOGICAL RESOURCES

John Milner Associates, Inc. (JMA) conducted the Phase 1B archeological survey fieldwork for the Marble River Wind Farm Project in May-June 2006. The level of effort for the survey included pedestrian surface survey of 84 acres and the excavation of 3,912 shovel tests (equivalent to approximately 244.5 acres), for a total Phase 1B archeological survey level of effort (LOE) equivalent to 328.5 acres. The Phase 1B archeological resulted in the identification of three historic-archeological sites located within the areas of potential effect for specific proposed project components:

The Clinton Mills Site is located north of Clinton Mills Road approximately two miles east of Churubusco (Appendix D: OPRHP Site A01907.000088; Appendix A: Map 31). At the time of the Phase 1B survey, proposed project components in the vicinity included only the use of Rogers Road (an existing gravel-paved road) for use as an access road for the Project. Phase 1B fieldwork at the site consisted of the identification and photography of readily apparent features (such as the foundation of the mill works, dam, millpond, and former railroad route) but did not include any subsurface testing. Subsequent redesign for the Final Project Layout includes a proposed overhead electrical line running parallel to (west of) Rogers Road through the site, and a proposed access road to a wind turbine running south from Clinton Mills through the southern portion of the site.

The former route of the Ogdensburgh & Lake Champlain Railroad (Appendix D: OPRHP Site A01907.000089; Appendix A: Maps 31-32) traverses the Project Area west-to-east on the north side of Clinton Mills Road, and turns southeast at Clinton Mills/Rogers Road and crosses to the south side of Clinton Mills Road. The former route of the O&LCRR is presently represented by a dirt and crushed-stone road running along the remnant railroad berm. The former railroad includes areas of built-up berm elevated on quarried stone (particularly through wetlands and/or areas of standing water) and areas of rock cut through outcrops. The dirt road is approximately 20 feet wide in most places, is not maintained, and is used primarily for recreational purposes including fishing and hunting access, ATVs, and snowmobiles. The portion of the former route of the railroad that extends east from Churubusco to Bombard Road in Ellenburg is an intact and readily apparent landscape feature. The Final Layout for the Project includes use of approximately 6,715 feet along the former railroad route extending southeast from Clinton Mills for the route of an overhead electrical line.

The Merchia Road Site (Appendix D: OPRHP Site A01907.000081; Appendix A: Map 9) includes a cellar hole/house foundation, stone-lined well, and barn foundation with an additional attached well. A proposed access road to a wind turbine generator (WTG 172) passes approximately 30-feet east of the cellar hole and well. JMA field personnel excavated 88 shovel tests in a grid pattern at 5-meter intervals across the yard area surrounding the house foundation, including the proposed route of the access road. In total, 38 artifacts were recovered from 12 of these shovel tests (see Table 8). The artifacts consisted of a variety of ceramic and glass fragments from domestic vessels that are typical for the early-to-middle-twentieth century. No archeological features or notable concentrations of artifacts were documented within the route of the proposed access road.

JMA also documented nine historic archeological sites that are located within the Project Area, but that are not located in the immediate vicinity of any proposed project components. These include (see Figure 4; Appendix D) the Liberty Pole Road Site 1 (OPRHP Site #A01907.000077), the Liberty Pole Road Site (A01907.000078), the Durant Site (A01907.000080), the Goka Site (A01907.000080), the Boomhower & Humphrey Site (A01907.000082), the Clark Site (A01907.000085), the Wilkins Site (A01907.000087), the Patnode Road 1 Site (A01909.000045), and the Patnode Road 2 Site (A01909.000046). These sites are all foundation remains of nineteenth-century farms, houses, or commercial structures that are depicted on historic atlases of the area. JMA provided locations and descriptive information to ESS and Marble River, LLC for all of these sites so that the sites can be avoided in the event that any

future project revisions are necessary. The Final Layout for the Project will not result in impacts to any of these sites.

## 4.2 FINAL PROJECT LAYOUT ARCHEOLOGICAL APE

The research design and Phase 1B fieldwork were based on the proposed Project layout (i.e., the Phase 1B Project Layout) that was available at the time of the survey fieldwork (see Section 2.1). Subsequent to the Phase 1B archeological survey fieldwork, some proposed components of the Project were eliminated, relocated, or re-routed. A significant change in the Project layout that occurred subsequent to the Phase 1B fieldwork was the replacement of considerable portions of the underground interconnect network in the northern portion of the Project Area with an overhead transmission line that will occupy a 120-foot-wide right-of-way.

The revised archeological APE and LOE for the Final Project Layout is presented in Table 10. The revised archeological APE for the Final Project Layout is larger (367.5 acres) than the APE for the Phase 1B Layout (267.1 acres). The increase in archeological APE is largely the result of the addition of the overhead electrical line with a 120-foot ROW located in the northern portion of the Project Area. The level of effort expended during the Phase 1B survey (equivalent to 328.5 acres) results in a shortfall for the Final Project Layout of 39 acres of un-surveyed archeological APE.

**Table 10. Archeological APE and LOE for the Final Project Layout.**

Final Project Layout Project Components Archeological APE	Total Archeology APE Acreage	Archeological APE Acreage by Landscape Classification Local Habitats										
		Outwash Plain				Knoll, Ridge, or Beach			Moraine		Valley Wall	Slope >12%

## 4.3 RECOMMENDATIONS

As a result of Project layout changes and additions that occurred subsequent to the Phase 1B survey fieldwork, the revised archeological APE for the Final Project Layout is larger (367.5 acres) than the level of effort expended during the Phase 1B survey (equivalent to 328.5 acres) resulting in a shortfall of 39 acres of un-surveyed archeological APE. JMA is currently conducting supplemental Phase 1B archeological survey to include these additional 39 acres of archeological APE, which will be equivalent to a supplemental level of effort of approximately 624 shovel tests. Because most of the additional un-surveyed archeological APE resulted from the addition of the overhead electrical line, JMA will conduct the majority of the supplemental Phase 1B work within the area of the proposed overhead electrical line right-of-way.

The Project may also require grading within wetland mitigation areas. JMA recommends that the acreage for these areas be included in the archeological APE and that supplemental Phase 1B work also include testing within these areas.

The Final Project Layout would result in potential impacts to three of the archeological sites identified during the Phase 1B survey (the Clinton Mills Site, the former route of the Ogdensburgh & Lake Champlain Railroad, and the Merchia Road Site). JMA recommends the following measures at these three sites:

**Clinton Mills Site:** JMA recommends that supplemental Phase 1B archeological fieldwork be conducted within those portions of the Clinton Mills Site where Project facilities are proposed to be located to better document the presence of foundations and other features associated with site and determine whether subsurface archeological deposits are present. This work will include identification and mapping of foundation remains and shovel testing within the route of the proposed overhead electrical line within this area as well as along the route of the proposed access road and underground interconnect that passes through the southern portion of the site.

**The Ogdensburgh & Lake Champlain Railroad:** In the opinion of JMA, construction of the overhead electrical line along the former route of the railroad should include both measures to avoid any permanent demolition or obstruction of the railroad route and provisions to restore and maintain the present condition of the former railroad route in this area so that it continues to be a readily apparent landscape feature.

**Merchia Road Site:** The cellar hole and well identified at the Merchia Road Site were located approximately 30 feet west of a proposed access road. No archeological features or notable concentrations of artifacts were documented within the route of the proposed access road. JMA recommended that the proposed access road be relocated further to the east to avoid the foundation remains. Marble River, LLC redesigned Project facilities in the vicinity of the site to insure that the documented features at the site are not impacted during construction. This included relocation of the proposed access road 50 feet to the east.

---

## Appendix B:

### Shovel Test Unit Stratigraphic Profiles

Shovel Test	Stratum	Depth	Soil Description	Artifacts
A01.01	1	0-24 cm	10YR 2/2 very dark brown silt loam	No Cultural Material
A01.01	2	24-32 cm	5YR 3/4 dark reddish brown silt loam	No Cultural Material
A01.01	3	32-40 cm	10YR 3/4 dark yellowish brown channery sandy loam	No Cultural Material
A01.02	1	0-26 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.02	2	26-42 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray silt loam	No Cultural Material
A01.02	3	42-51 cm	10YR 3/6 dark yellowish brown silty clay loam	No Cultural Material
A01.03	1	0-23 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.03	2	23-44 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray silt loam	No Cultural Material
A01.03	3	44-54 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.04	1	0-23 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.04	2	23-33 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray silt loam	No Cultural Material
A01.05	1	0-26 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.05	2	26-31 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray silt loam	No Cultural Material
A01.06	1	0-26 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.06	2	26-45 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray silt loam	No Cultural Material
A01.06	3	45-49 cm	10YR 3/6 dark yellowish brown channery silt loam	No Cultural Material
A01.07	1	0-20 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.07	2	20-23 cm	10YR 4/6 dark yellowish brown mottled with 10YR 6/1 gray channery silt loam	No Cultural Material
A01.08	1	0-25 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.08	2	25-36 cm	10YR 3/4 dark yellowish brown silt loam	No Cultural Material
A01.09	1	0-28 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.09	2	28-38 cm	10YR 4/2 dark grayish brown mottled with 10YR 4/6 dark yellowish brown silt loam	No Cultural Material
A01.09	3	38-48 cm	10YR 4/6 dark yellowish brown silt loam (subsoil)	No Cultural Material
A01.10	1	0-21 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.10	2	21-40 cm	10YR 4/6 dark yellowish brown silt loam	No Cultural Material
A01.11	1	0-40 cm	10YR 2/2 very dark brown silt loam	No Cultural Material
A01.11	2	40-65 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.11	3	65-70 cm	10YR 6/8 brownish yellow silt loam	No Cultural Material
A01.12	1	0-23 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.12	2	23-40 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.12	3	40-50 cm	10YR 6/8 brownish yellow silt loam	No Cultural Material
A01.13	1	0-22 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.13	2	22-36 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.13	3	36-41 cm	10YR 6/8 brownish yellow silt loam	No Cultural Material
A01.14	1	0-21 cm	10YR 3/3 dark brown silt loam	No Cultural Material
A01.14	2	21-35 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.14	3	35-40 cm	10YR 6/8 brownish yellow silt loam	No Cultural Material
A01.15	1	0-23 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material

Shovel Test	Stratum	Depth	Soil Description	Artifacts
A01.15	2	23-43 cm	10YR 4/6 dark yellowish brown silt loam, excavation terminated due to a rock impasse	No Cultural Material
A01.16	1	0-20 cm	10YR 3/2 very dark grayish brown silt loam, excavation terminated due to a rock impasse	No Cultural Material
A01.17	1	0-30 cm	10YR 3/2 very dark grayish brown silt loam, excavation terminated due to a rock impasse	No Cultural Material
A01.17	2	30-38 cm	5YR 5/1 gray channery sandy loam, excavation terminated due to a rock impasse	No Cultural Material
A01.18	1	0-23 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.18	2	23-29 cm	5YR 4/3 reddish brown silt loam	No Cultural Material
A01.18	3	29-45 cm	10YR 5/6 yellowish brown channery sandy loam	No Cultural Material
A01.19	1	0-25 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.19	2	25-40 cm	5YR 4/3 reddish brown channery sandy loam	No Cultural Material
A01.20	1	0-23 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.20	2	23-40 cm	5YR 4/3 reddish brown silt loam, excavation terminated due to a rock impasse	No Cultural Material
A01.21	1	0-26 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.21	2	26-44 cm	5YR 4/3 reddish brown silt loam	No Cultural Material
A01.21	3	44-51 cm	7.5YR 5/4 brown channery sandy loam	No Cultural Material
A01.22	1	0-19 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.22	2	19-39 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.23	1	0-22 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.23	2	22-33 cm	10YR 5/2 grayish brown silt loam	No Cultural Material
A01.24	1	0-26 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.24	2	26-40 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.25	1	0-33 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.25	2	33-46 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.26	1	0-25 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.26	2	25-40 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.26	3	40-50 cm	10YR 4/6 dark yellowish brown silt loam	No Cultural Material
A01.27	1	0-28 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.27	2	28-45 cm	10YR 3/6 dark yellowish brown silt loam	No Cultural Material
A01.27	3	45-50 cm	10YR 4/6 dark yellowish brown silt loam	No Cultural Material
A01.28	1	0-29 cm	10YR 3/3 dark brown silt loam (plowzone)	No Cultural Material
A01.28	2	29-41 cm	10YR 5/4 yellowish brown silt loam	No Cultural Material
A01.29	1	0-30 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.29	2	30-60 cm	5YR 4/3 reddish brown channery silt loam	No Cultural Material
A01.30	1	0-23 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.30	2	23-43 cm	5YR 4/3 reddish brown silt loam	No Cultural Material
A01.30	3	43-52 cm	7.5YR 7/4 pink channery sandy loam	No Cultural Material
A01.31	1	0-30 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.31	2	30-46 cm	5YR 4/3 reddish brown channery sandy loam	No Cultural Material
A01.32	1	0-19 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material

Shovel Test	Stratum	Depth	Soil Description	Artifacts
A01.32	2	19-35 cm	5YR 4/3 reddish brown silt loam, excavation terminated due to a rock impasse	No Cultural Material
A01.33	1	0-20 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.33	2	20-48 cm	7.5YR 4/4 brown channery silt loam	No Cultural Material
A01.34	1	0-28 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.34	2	28-48 cm	5YR 4/3 reddish brown silt loam	No Cultural Material
A01.34	3	48-56 cm	7.5YR 4/3 brown channery silt loam	No Cultural Material
A01.35	1	0-30 cm	10YR 3/2 very dark grayish brown silt loam	No Cultural Material
A01.35	2	30-45 cm	5YR 4/3 reddish brown silt loam	No Cultural Material
A01.35	3	45-59 cm	7.5YR 4/3 brown channery silt loam	No Cultural Material
A01.36	1	0-22 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.36	2	22-23 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles, excavation terminated at bedrock	No Cultural Material
A01.37	1	0-25 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.37	2	25-39 cm	7.5YR 3/4 dark brown sand and gravel (subsoil)	No Cultural Material
A01.37	3	39-55 cm	7.5YR 4/4 brown sand and gravel (subsoil)	No Cultural Material
A01.38	1	0-20 cm	7.5YR 3/4 dark brown silt loam (plowzone)	No Cultural Material
A01.38	2	20-35 cm	7.5YR 3/4 dark brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material
A01.38	3	35-43 cm	7.5YR 4/4 brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material
A01.39	1	0-20 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.39	2	20-29 cm	7.5YR 3/4 dark brown sand and gravel, excavation terminated due to a rock impasse	No Cultural Material
A01.40	1	0-23 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.40	2	23-39 cm	7.5YR 3/4 dark brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material
A01.40	3	39-55 cm	7.5YR 4/4 brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material
A01.41	1	0-30 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.41	2	30-44 cm	7.5YR 3/4 dark brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material
A01.41	3	44-48 cm	7.5YR 4/4 brown sand and gravel, with gravel, pebbles, and cobbles (glacial till)	No Cultural Material
A01.42	1	0-18 cm	10YR 3/2 very dark grayish brown silt loam with pebbles and cobbles (plowzone)	No Cultural Material
A01.42	2	18-25 cm	7.5YR 4/3 brown sand and gravel, with gravel, pebbles, and cobbles (subsoil)	No Cultural Material

Investigator Patrick J. Heaton, RPA – Principal Archeologist, John Milner Associates, Inc.

Manuscript or published report (s) (reference fully):

John Milner Associates, Inc. (2007) *Marble River Wind Farm: Phase 1B Archeological Survey*. Report prepared for ESS Group, Inc. & Marble River, LLC. John Milner Associates, Inc., Croton-on-Hudson, NY.

Present repository of materials JMA, Croton-on-Hudson, New York

6. SITE INVENTORY:

a. Date constructed or occupation period ca. 1860s-1930s

b. Previous owners, if known \_\_\_\_\_

c. Modifications, if known

7. SITE DOCUMENTATION (append additional sheets, if necessary):

a. Historic map references:

1. not depicted on the 1856 Ligowski *Map of Clinton County, New York*. O.J. Lamb, Philadelphia.

2. "Clinton Mills" on the 1869 Beers *Atlas of Clinton County, New York*. Walker & Jewett, NY.

3. structures depicted on the 1915 *Churubusco, NY* 15-minute USGS topographic quadrangle.

4. not depicted on the 1964 *Churubusco, NY* 7.5-minute USGS topographic quadrangle.

b. Representation in existing photography

none identified

c. Primary and secondary source of documentation (reference fully)

1. Hurd, Duane Hamilton (1880) *History of Clinton and Franklin Counties, New York*. J.W. Lewis & Co., Philadelphia. Page 301.

2. Child, Hamilton (1862) *Gazetteer & Directory of Franklin and Clinton Counties*. Hamilton Child, Ogdensburgh, New York. Page 75.

3. Town of Clinton Historical Society (TCHS) (1976) *The History of the Town of Clinton*. Manuscript on file, Town of Clinton Historian's Office, Churubusco, NY.

d. Persons with knowledge of site

1. Mrs. Diana Lagree, Town of Clinton Historian. Town Hall, Churubusco, NY.

2. Mrs. Addie Shields, Clinton County Historian. Clinton County Government Center, Plattsburgh, NY.

8. LIST OF MATERIAL REMAINS OTHER THAN THOSE USED IN CONSTRUCTION

(be as specific as possible in identifying object and material):

No artifacts were recovered from the site.

If prehistoric materials are evident, check here and fill out prehistoric site form. \_\_\_\_\_

9. MAP REFERENCES: Map or maps showing exact location and extent of site must accompany this form and be identified by source and date. Keep this submission to 8½" x 11", if possible.

USGS 7½ Minute Series Quad. Name Churubusco, N.Y.

For Office Use Only--UTM Coordinates E 198723 N 680559

10. PHOTOGRAPHY (optional for environmental impact survey): Please submit a 5"x7" black and white print(s) showing the current state of the site. Provide a label for the print(s) on a separate sheet.

See attached.

## Site Description:

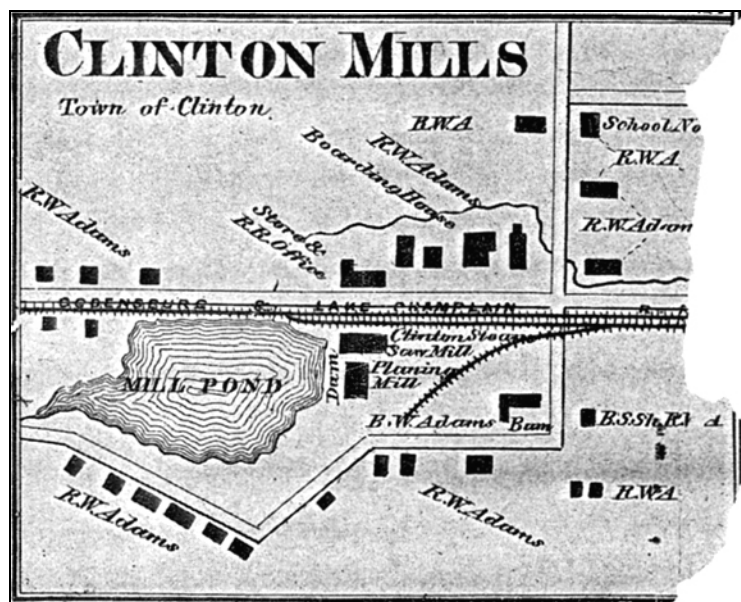

JMA documented the Clinton Mills Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. Clinton Mills is the site of a ca. 1860s-1930s lumber mill and company town located approximately two miles east of Churubusco, along the English River and former route of the Ogdensburgh & Lake Champlain Railroad. The former hamlet is now represented by only a few standing structures. The original layout of buildings at Clinton Mills is depicted on the 1869 Beers atlas (see below). The industrial complex and “company town” included a millpond, steam-powered sawmill, planing mill, blacksmith shop, railroad depot, company store, boarding houses, and a school. In 1865, R.W. Adams & Co. commenced lumber mill operations at the site. R.W. Adams was a New York City capitalist who owned approximately 13,000 acres of timberland in the region and operated lumberyards at the Atlantic Yards in Brooklyn. Firms that operated the mills included R.W. Adams & Co., Adams, Lee, & Co., and Adams & Sons. The mills processed an estimated 80,000 logs per year resulting in approximately 8,000,000 feet of lumber sent to market each year (TCHS 1976).

In May 1877 the mills and most of the residences in Clinton Mills burned to the ground in a conflagration that resulted from a forest fire. At that time, there were 64 families that lived and worked at Clinton Mills. Hurd’s *History of Clinton & Franklin Counties* describes the site prior to the 1877 fire:

Clinton Mills had previous to the fire grown to be a promising village of about 400 inhabitants, mostly in the employ of R.W. Adams & Co. It was nicely laid out. Most of the houses, of which there were nearly 50, were neat frame buildings, many of them owned by their occupants, and well furnished. The signs of general prosperity and thrift were universal... There was a handsome school edifice, used also for a church, with a daily school attendance of 50 pupils. The steam-mills were said to be the largest and best on the line of the Ogdensburgh [sic] road [railroad], and they were run by two 80 horse-power engines. Their store was claimed to be the largest in Clinton County, and was well stocked with all lines of goods. But where all was so prosperous and promising only two frame houses, and a couple of barns remained after the fire. The loss was \$300,000, partially insured (Hurd 1880:303).

The works at Clinton Mills were never fully rebuilt to their pre-1877 extents. Historical sources describe another fire in 1888 at the rebuilt Clinton Mills, which resulted in considerably less damage. Clinton Mills continued as a railroad stop on the Ogdensburgh & Lake Champlain until 1931 (TCHS 1976).

Extant features at the site observed during the Phase 1B archeological survey include the former O&LCRR berm (now a dirt road), the foundation remains of the mill, the dam and mill pond along the English River, and a standing structure (an occupied residence) that likely is the former boardinghouse identified on the 1869 Beers atlas.

Detail of “Clinton Mills” inset map from the 1869 Beers *Atlas of Clinton County, New York*.

**Photographs:**

An existing residence at Clinton Mills likely represents the former boardinghouse depicted on the Beers atlas; the dirt road at left marks the former route of the Ogdensburgh & Lake Champlain Railroad (view west).

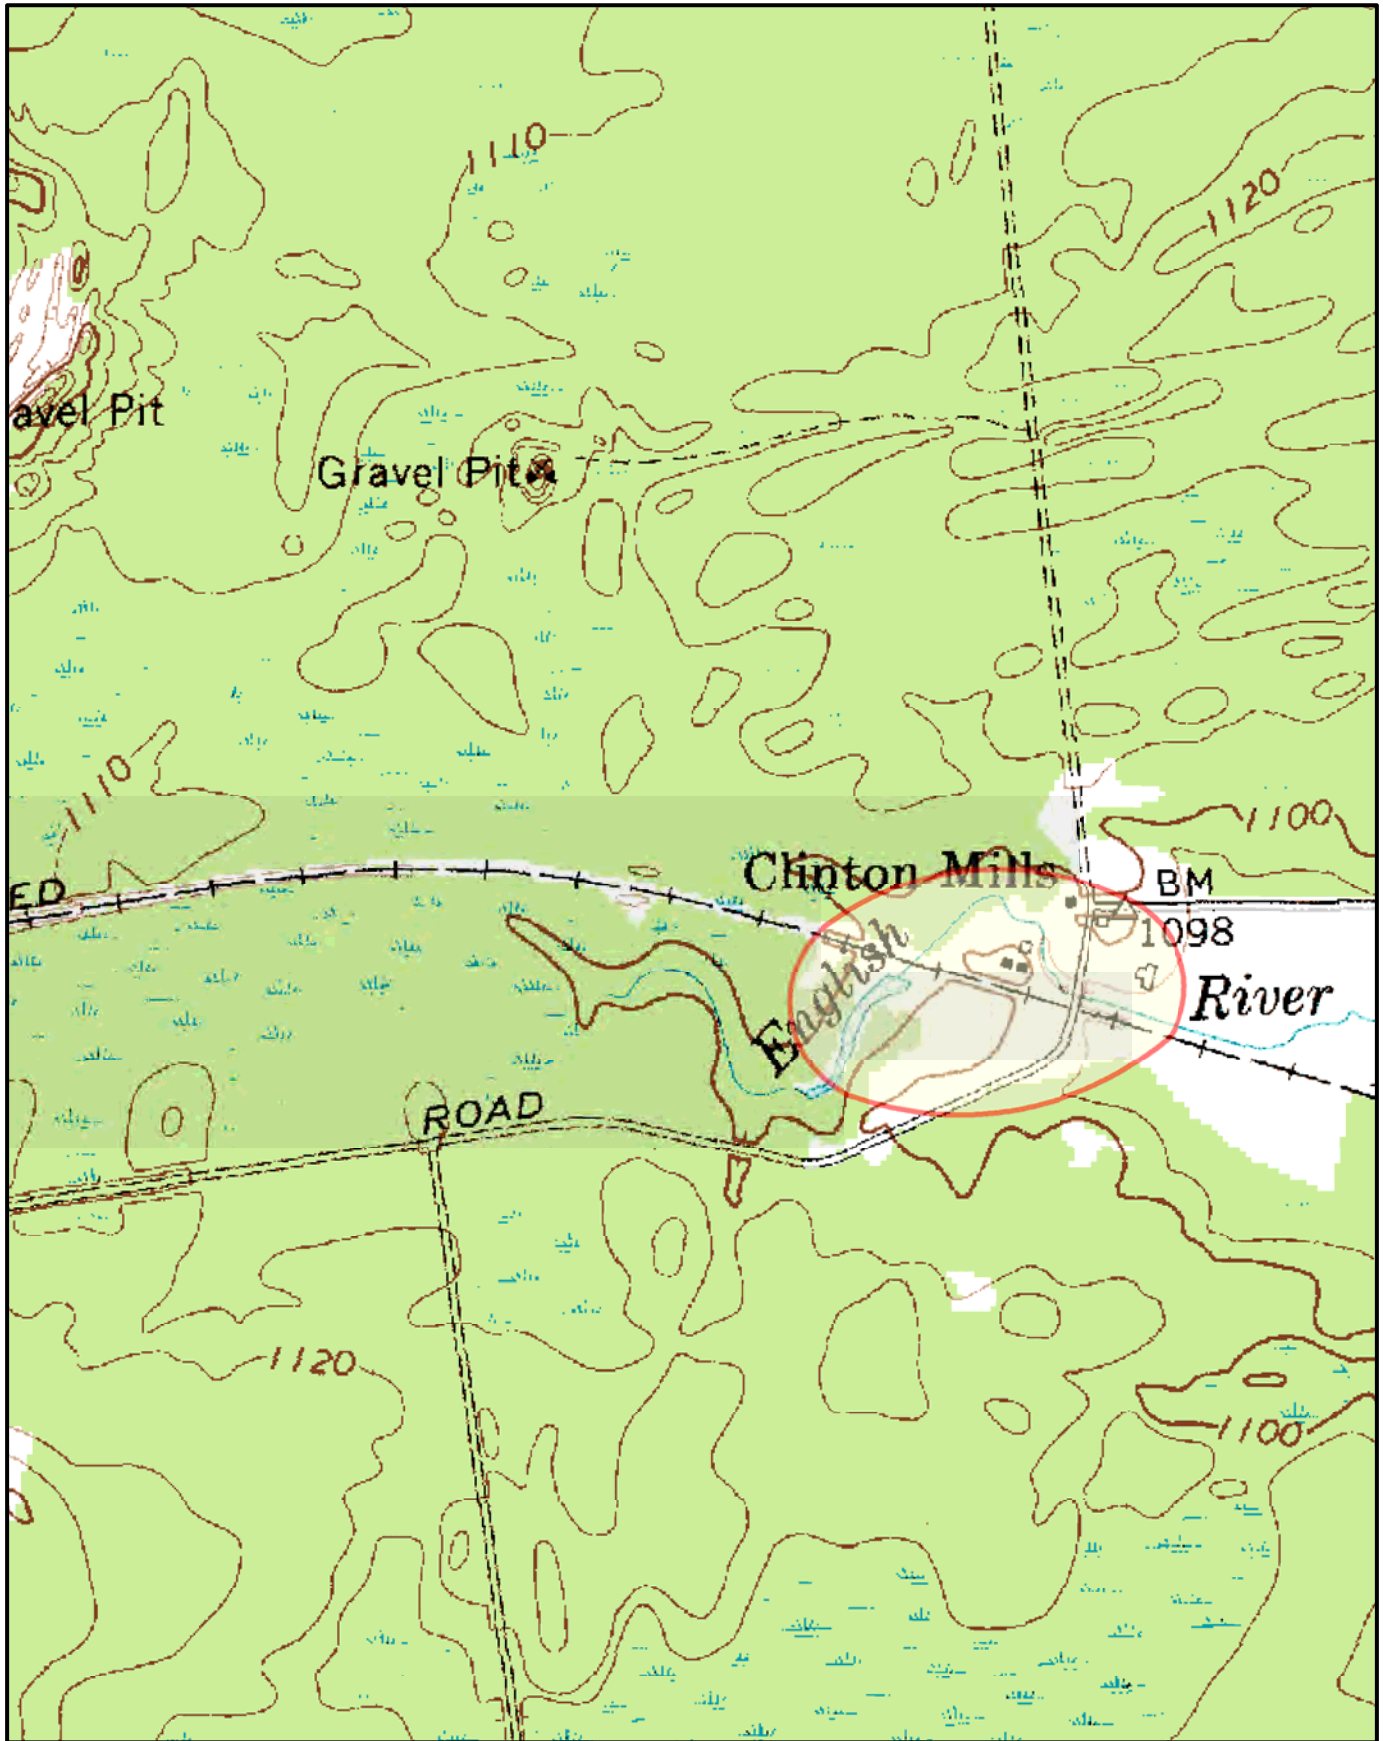

Dam and millpond along the English River at Clinton Mills (view north-northwest).

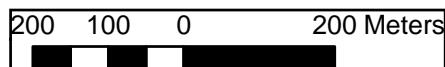

Cement foundation remains of the mill works at Clinton Mills (view east).

Cement foundation remains of the millworks at Clinton Mills (view west).

**Site Description:**

JMA documented a portion of the former route of the Ogdensburgh & Lake Champlain Railroad (O&LCRR) during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The construction of the O&LCRR in 1853 provided for the efficient transportation of local lumber products to distant markets (Hurd 1880:301). Stations on the railroad near the Project Area included Ellenburg Depot, Clinton Mills, and Churubusco (or the Summit Depot).

The former route of the Ogdensburgh & Lake Champlain Rail Road (O&LCRR) is presently represented by a dirt and crushed-stone road running atop the remnant railroad berm. The dirt road is approximately 20 feet wide in most places, is not maintained, and is used primarily for recreational purposes including fishing and hunting access, ATVs, and snowmobiles. The portion of the former route of the railroad that extends east from Churubusco to Bombard Road in Ellenburg is an intact and readily apparent historic landscape feature.

**Photographs:**

Existing conditions along the former route of the Ogdensburgh & Lake Champlain Railroad (O&LCRR):

**Site Description:**

JMA documented the Liberty Pole Road Historic Site 1 during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located on the north side of Liberty Pole Road, approximately 1.5 miles east of NYS Route 189. A structure is depicted at this location on the 1915 and 1964 USGS surveys.

The site consists of a relatively large, well-built house foundation with an 8-foot-deep cellar hole that measures approximately 21 feet east-to-west by 26 feet north-to-south, with a 16-foot-by-14-foot kitchen-ell extending off the eastern side. The foundation is constructed of dry-laid, quarried and cut, pinkish-gray native quartzite or sandstone (the local bedrock). The foundation is located approximately 20 feet north of Liberty Pole Road and is lightly overgrown with birch, sumac, and raspberries.

Foundation remains at the Liberty Pole Road Historic Site 1 (view to the east).

**Site Description:**

JMA documented the Liberty Pole Road Historic Site 2 during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located on the south side of Liberty Pole Road, approximately 1.5 miles east of NYS Route 189. A structure is depicted at this location on the 1915 USGS survey.

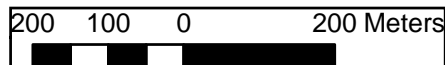

The site consists of a pushed-in, dry-laid fieldstone house foundation (cellar hole), which measures approximately 26 feet east-to-west by 14 feet north-to-south. The foundation is located approximately 50 feet south of Liberty Pole Road. A large push-pile of disturbed earth obscures the northwest corner of the foundation. Remnant perennial yard plantings at the site include two large clumps of lilac bushes located along the eastern and southern sides of the foundation.

**Site Description:**

JMA documented the Clark Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located in the north side of Robare Pond Road, approximately 600 feet east of NYS Route 189. A structure is depicted at this location on the 1856 map, the 1869 Beers atlas (identified as the property or residence of “Mrs. Clark”), and on the 1915 USGS survey.

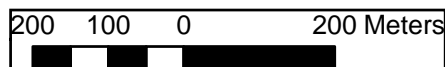

The site consists of a relatively large, shallow (approximately 3-foot-deep) depression or cellar hole, which measures approximately 20 feet east-to-west by 30 feet north-to-south. The walls of the depression are defined by course of dry-laid fieldstone interspersed with large boulders of native quartzite (the local bedrock). A low stone foundation extends 15 feet off of the south face of the foundation, which likely represents a former front porch. The foundation is located approximately 40 feet north of Robare Pond Road.

Foundation remains at the Clark Historic Site (view to the south).

**Site Description:**

JMA documented the Merchia Road Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. This site consists of foundation remains from an abandoned farmstead complex located approximately 220 feet north of Merchia Road, approximately 4,750 feet west of Jones Road. The “F. Sampica” residence is depicted in the general vicinity of the site on the 1869 Beers atlas and a structure (unidentified) is depicted at the location of the site on the 1915 USGS survey. No structures are depicted in the vicinity of the site on the 1856 Ligowski map or 1964 USGS survey.

Extant, aboveground features at the site include a 16-foot-by-24-foot fieldstone cellar hole, a 5-foot-diameter stone-lined well located south of the cellar hole, a 40-foot-by-65-foot barn foundation, and a second 7-foot-diameter stone-lined well at the southwest corner of the barn foundation. Slightly raised, hummocky areas with disarticulated fieldstone located around the cellar hole suggest that the former structure may have additions or porches that extended north and west of the main house foundation. The entire site area was overgrown with dense vegetation, but the former yard area surrounding the house foundation (cellar hole) is defined by tall shade trees along the northern and eastern sides of the yard.

JMA excavated 88 shovel tests (B26.01-88) in a grid pattern at 5-meter intervals across the yard area surrounding the cellar hole. In total, 38 artifacts were recovered 12 of these shovel tests (see table below). Soils in this area consisted of 10YR 2/1 black, 10YR 3/1 very dark gray, or 10YR 3/3 very dark brown silt loam that extended in depth to between 14 to 36 cm below ground surface (bgs) underlain by 10YR 3/6 to 4/6 dark yellowish brown, 7.5YR 4/4 brown, or 10YR 6/2 light brownish gray silt loam. All of the artifacts recovered from shovel tests were from within the uppermost soil stratum and generally recovered from the upper 10 cm within each shovel test. Soils across the site were uniformly rocky with gravel, cobbles, and fragments of sandstone bedrock. Soils were also saturated across the site, with groundwater being encountered in most of the shovel tests. The fact that the cellar hole was also filled with standing water provides further indication that the soils in the vicinity are poorly drained.

**Artifacts Recovered from the Merchia Road Historic Site.**

Shovel Test/Context	Stratum	Depth	Artifacts Recovered
B26.1	1	0-32 cm	1 Ironstone/Hotelware Sherd (ca. 1900s)
B26.8	1	0-14 cm	1 Aqua Glass Bottle Fragment
B26.10	1	0-16 cm	1 Clear (White) Glass Bottle Fragment
B26.18	1	0-19 cm	1 Brown Stoneware Sherd (post-1810)
			1 Plain White Ironstone Sherd (ca. 1813-1900)
			5 Window Glass Fragments
B26.19	1	0-22 cm	1 Cut/Wrought Nail
			8 Scraps of Leather: Shoe Parts (Discarded)
B26.20	1	0-24 cm	7 Plain Whiteware Sherds (post-1810)
B26.32	1	0-23 cm	1 Aqua Glass Bottle Fragment
B26.37	1	0-14 cm	1 Clear (White) Glass Bottle Fragment
B26.47	1	0-22 cm	3 Plain White Ironstone Sherds (ca. 1813-1900)
B26.48	1	0-33 cm	1 Rockingham Yellowware Sherd (ca. 1840-1910)
B26.49	1	0-36 cm	1 Brown Stoneware Sherd (post-1810)
			1 Plain Whiteware Sherd (post-1810)
			3 Unidentified Metal Fragments (Discarded)
B26.80	1	0-8 cm	1 Plain White Ironstone Sherd (ca. 1813-1900)
Cellar Hole	Surface Finds	-	1 Amber Medicine Bottle: "WHITEHALL" (post-1954)
			1 Clear (White) Medicine Bottle: "Rexall/PHARMACY" (post-1920)
			1 Metal Can: Shurfine Orange Juice (post-1948)

The artifacts recovered from shovel tests included a variety of ceramic and glass fragments from domestic vessels that are typical for the early-twentieth century. JMA field personnel also examined the scatter of household rubbish that was strewn across, within, and around the water-filled cellar hole. This rubbish was primarily glass bottles and metal cans, and included brown/amber glass “CRISCO” vegetable oil bottle (post-1960), a five-gallon steel gasoline can, a one-gallon plastic “CLOROX” bottle, and a clear/colorless glass “WESSON OIL” bottle. The presence of an oxidized and partially corroded New York State license plate stamped “1964” within this assemblage provides a general date soon after which the site was likely abandoned.

**Photographs:**

Twentieth-century household rubbish (mostly metal cans, glass bottles, and plastic jugs/bottles) in and around the cellar hole/house foundation (view to the west).

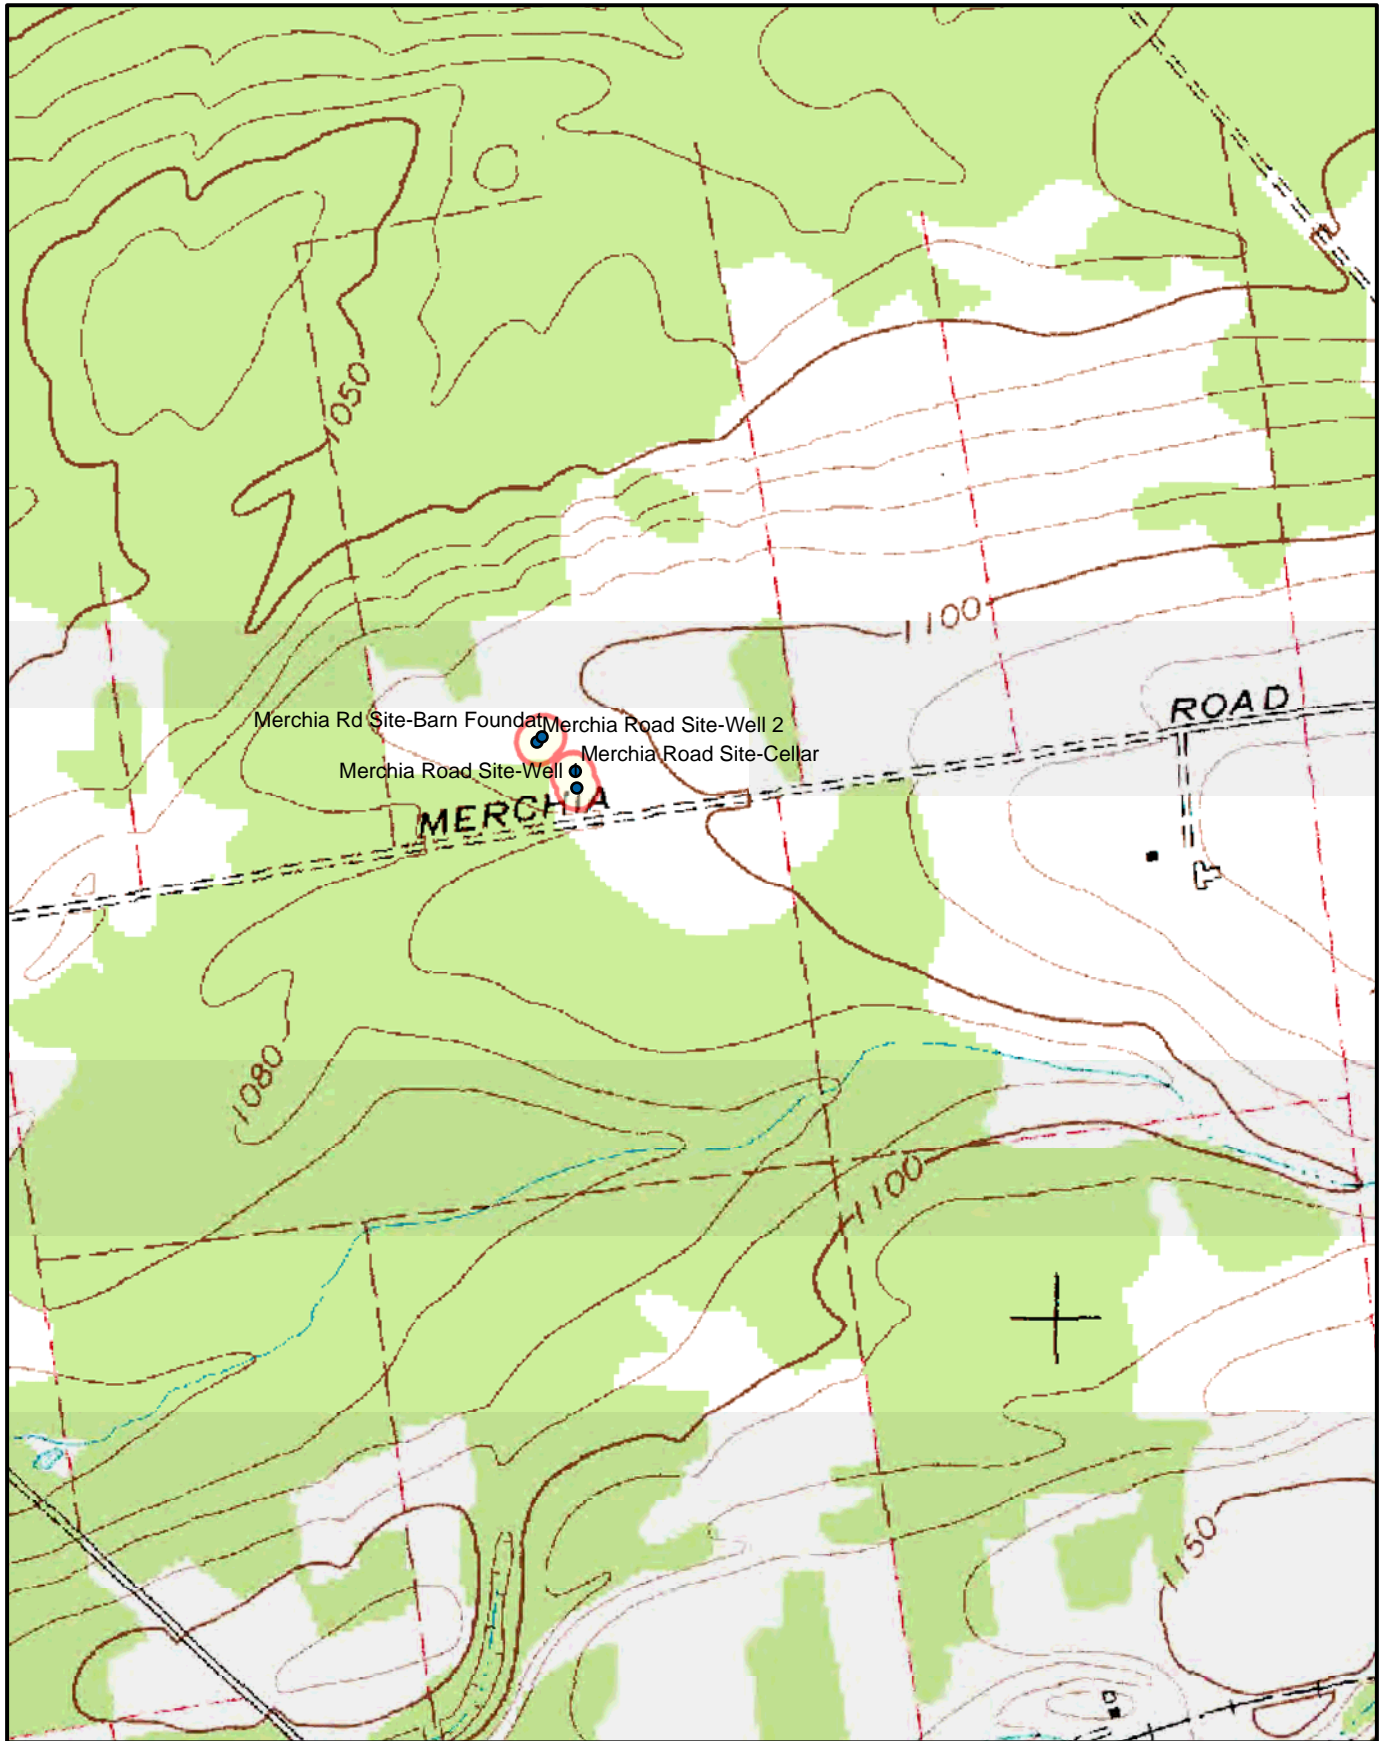

Stone-lined well located south of the house foundation (view to the southwest).

Stone-lined well and fieldstone barn-foundation wall (view to the east).

Large 7-foot-diameter stone-lined well located at the southwest corner of the barn foundation (view to the east).

**Site Description:**

JMA documented the Wilkins Road Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located on the east side of an existing private logging road, approximately 2 miles north of Clinton Mills Road. A structure is depicted at this location on the 1915 USGS survey. No structures are depicted in this area on nineteenth-century maps, nor on the 1964 USGS survey.

Features documented at the site include a 15-foot diameter depression lined and filled with loose, disarticulated fieldstone (presumed to represent a pushed-in house foundation or cellar hole), a 4-foot diameter stone-lined well, and a 46-foot-by-16-foot fieldstone capped with cement paving barn foundation elevated approximately 1.5 feet above the ground surface. The area surrounding the site has been recently and extensively logged, and most of the ground surface and parts of the barn foundation are covered with slash and timber detritus. The ground surface is heavily rutted from the treads of skidders and logging vehicles. Vegetation immediately surrounding the pushed-in cellar and barn foundations consists of overgrown lilac, hawthorne, and poplars.

**Photographs:**

Existing logging road with pushed-in cellar hole in area of low vegetation at left (view to the south-southeast).

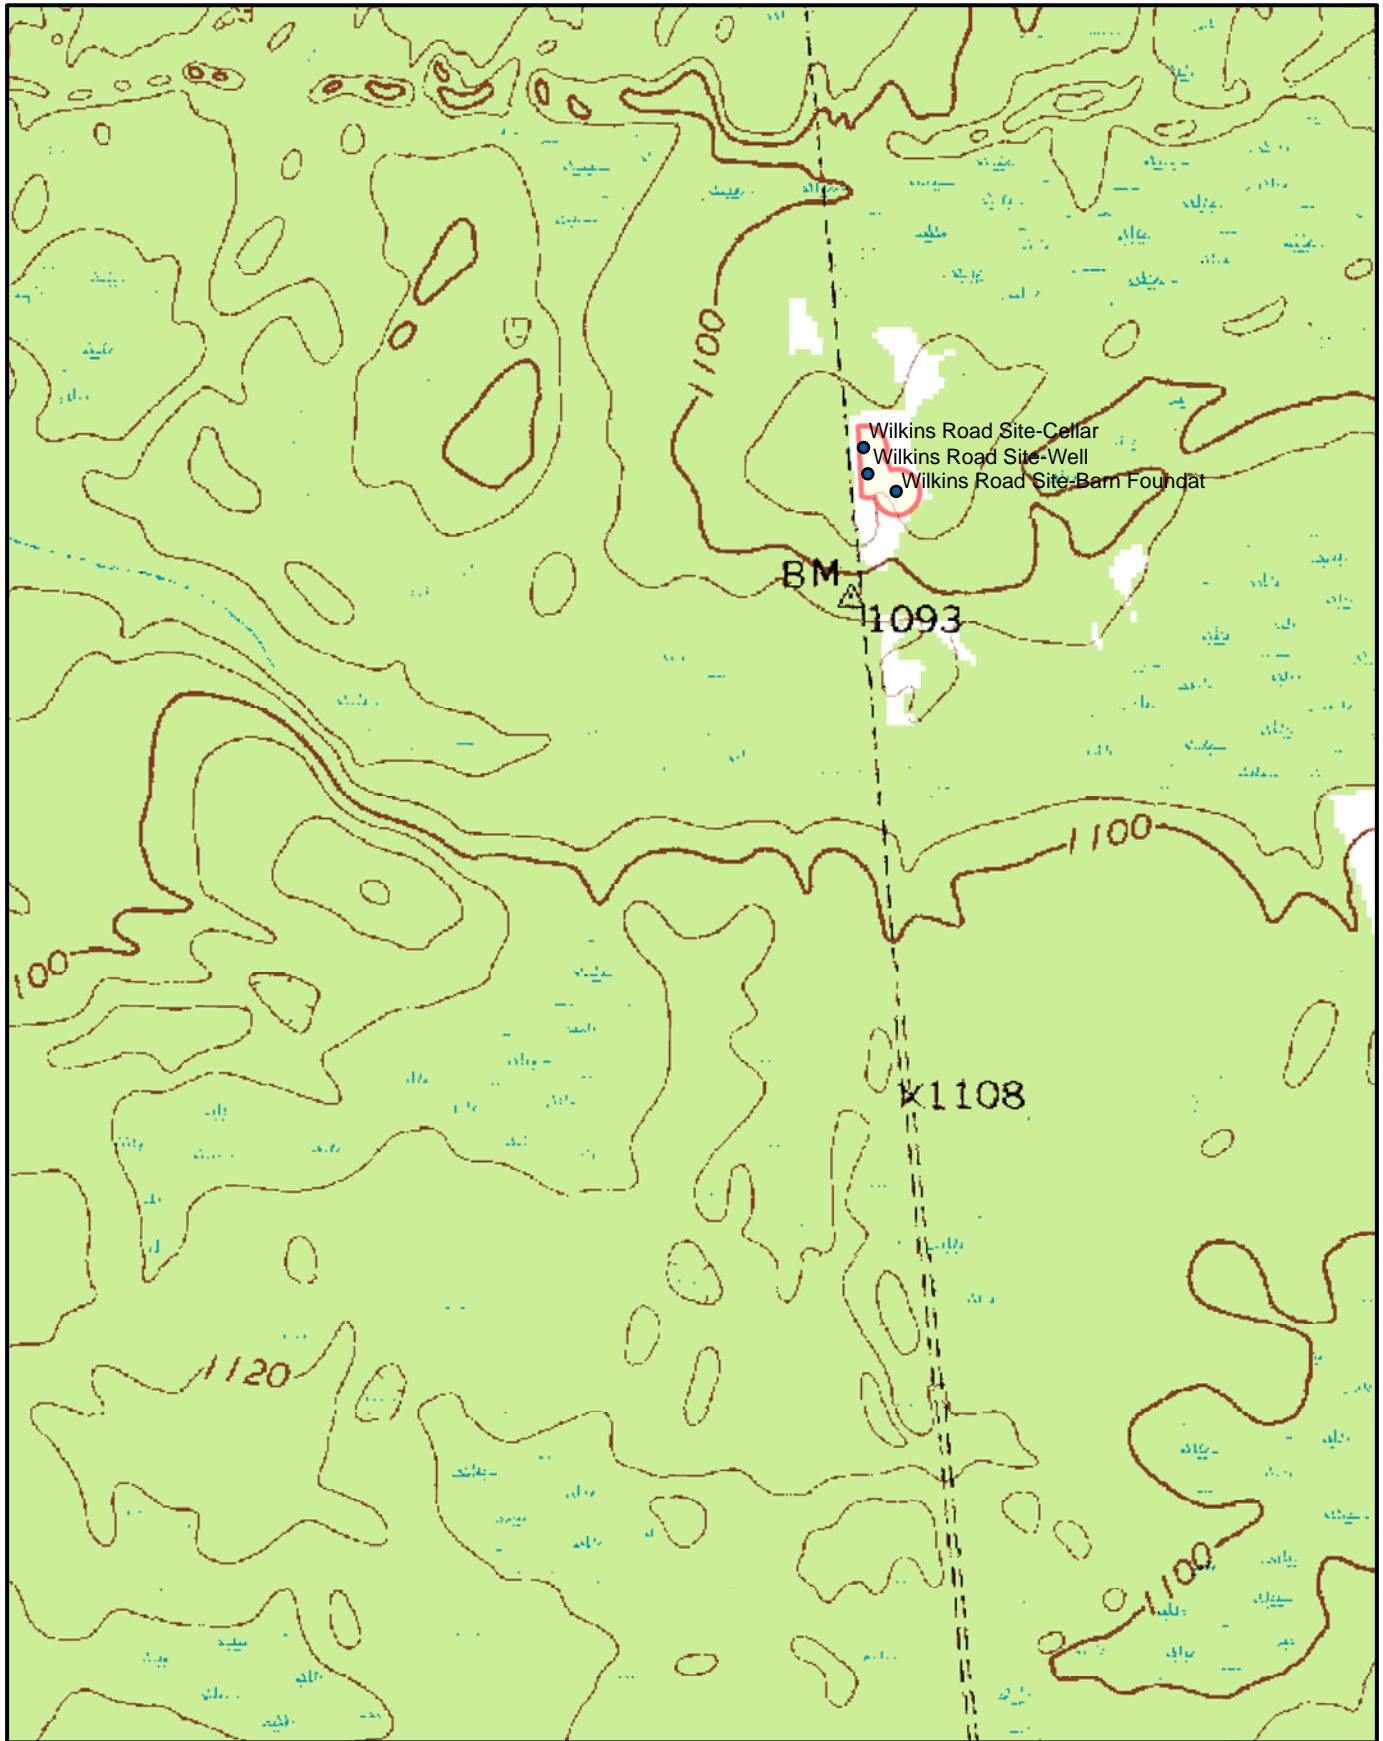

Pushed-in cellar hole or house foundation at the Wilkins Road Site (view to the east).

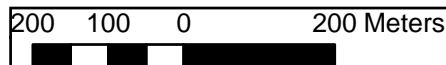

Stone-lined well located south-southwest of the pushed-in cellar hole (view to the west).

Context of the site with logging-vehicle ruts and slash; arched poplars at left indicate the location of the barn foundation (view to the east).

**Site Description:**

JMA documented the Boomhower & Humphrey Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located on the north side of the former route of the Ogdensburgh & Lake Champlain Railroad (O&LCRR), approximately 3500 feet east of Churubusco. The former route of the O&LCRR is presently represented by a dirt and crushed-stone road running atop the remnant railroad berm. A structure is depicted at this location on the 1869 Beers atlas, identified as the property of “Boomhower & Humphrey.”

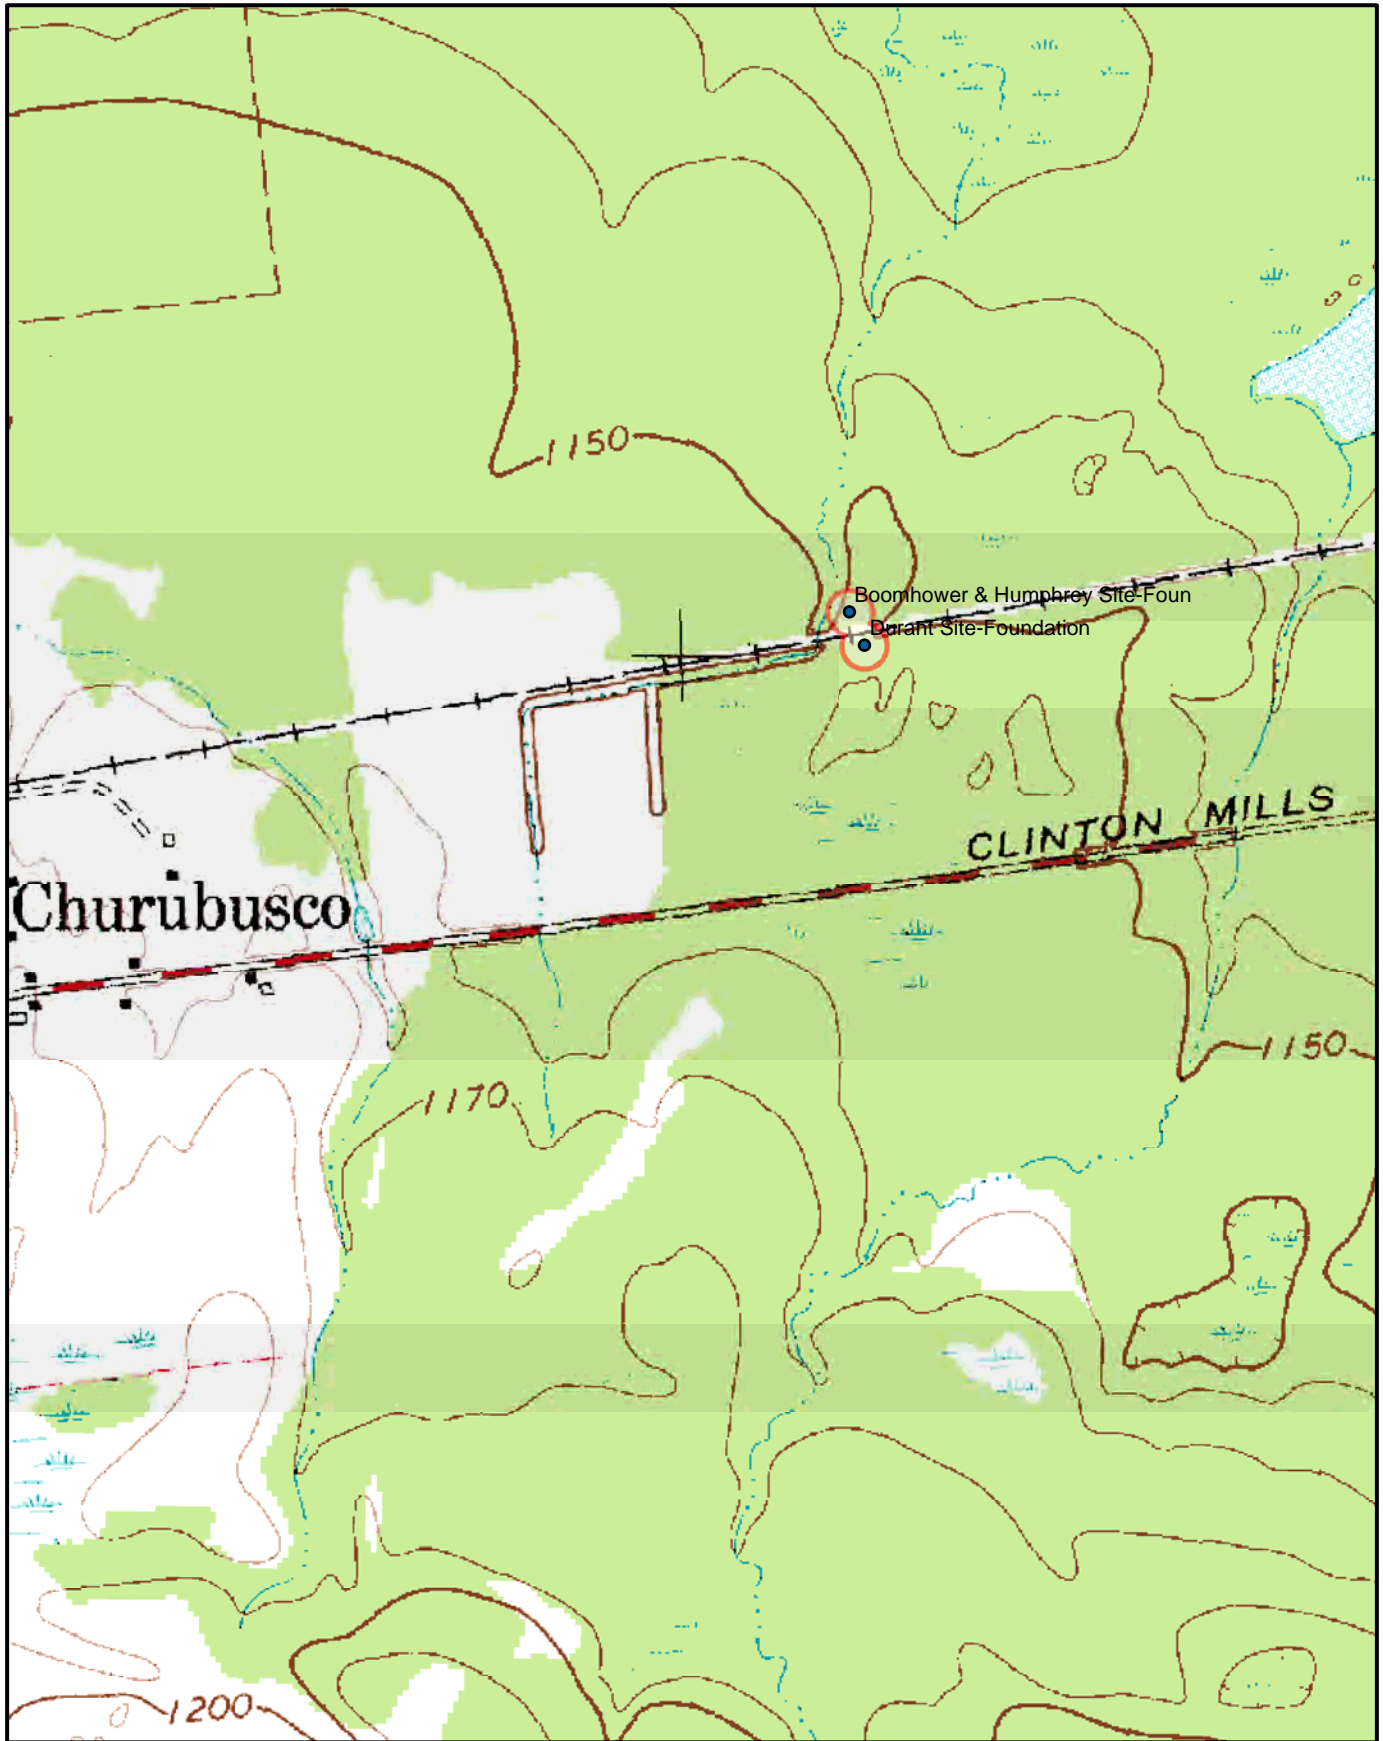

The site is represented by a shallow cellar hole (approximately 2-feet deep), which measures approximately 11 feet east-to-west by 15 feet north-to-south. The depression is heavily overgrown with weeds and brambles, however, the interior walls of the depression appear to be lined with a few courses of dry-laid fieldstone. The foundation is located approximately 55 feet north of the railroad berm, and approximately 75 feet east of the culverted railroad crossing over an unnamed stream. The surrounding area is heavily overgrown with birch, beech, poplar, and red maple.

Historic sources identify the structure labeled “Boomhower & Humphrey” on the 1869 atlas as the site of a general store. John M. Humphrey is identified in the *Child Gazetteer* (1862:75) as a grocer, lawyer, and supervisor in the hamlet of Summit (Churubusco). Hurd’s *History of Clinton & Franklin Counties* states that “the present store was built in 1865, and has been occupied by John Humphrey, Humphrey & Boomhower, and in 1879 by Rufus M. Humphrey” (1880:301).

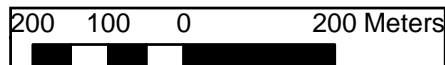

Heavily overgrown foundation remains at the Boomhower & Humphrey Site (view to the north).

**Site Description:**

JMA documented the Durant Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located on the south side of the former route of the Ogdensburgh & Lake Champlain Railroad (O&LCRR), approximately 3500 feet east of Churubusco. The former route of the O&LCRR is presently represented by a dirt and crushed-stone road running atop the remnant railroad berm. A structure is depicted at this location on the 1869 Beers atlas, identified as the property or residence of “J. Durant.”

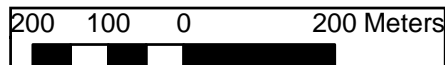

The site is represented by a shallow (approximately 1.5-2 feet deep) depression that may represent a cellar hole, which measures approximately 10 feet east-to-west by 15 feet north-to-south. The depression appears to have been pushed-in. The interior walls of the depression are roughly defined disarticulated fieldstones. The foundation is located approximately 15 feet south of the railroad berm, and approximately 200 feet east of a culverted railroad crossing over an unnamed stream.

Existing conditions at the Durant Historic Site (view to the south).

**Site Description:**

JMA documented the Saphouse Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located approximately 1,120 feet south of Liberty Pole Road, approximately 2 miles east of NYS Route 189. No structures or other indications of the site are depicted in the vicinity of this location on any known historic maps of the area.

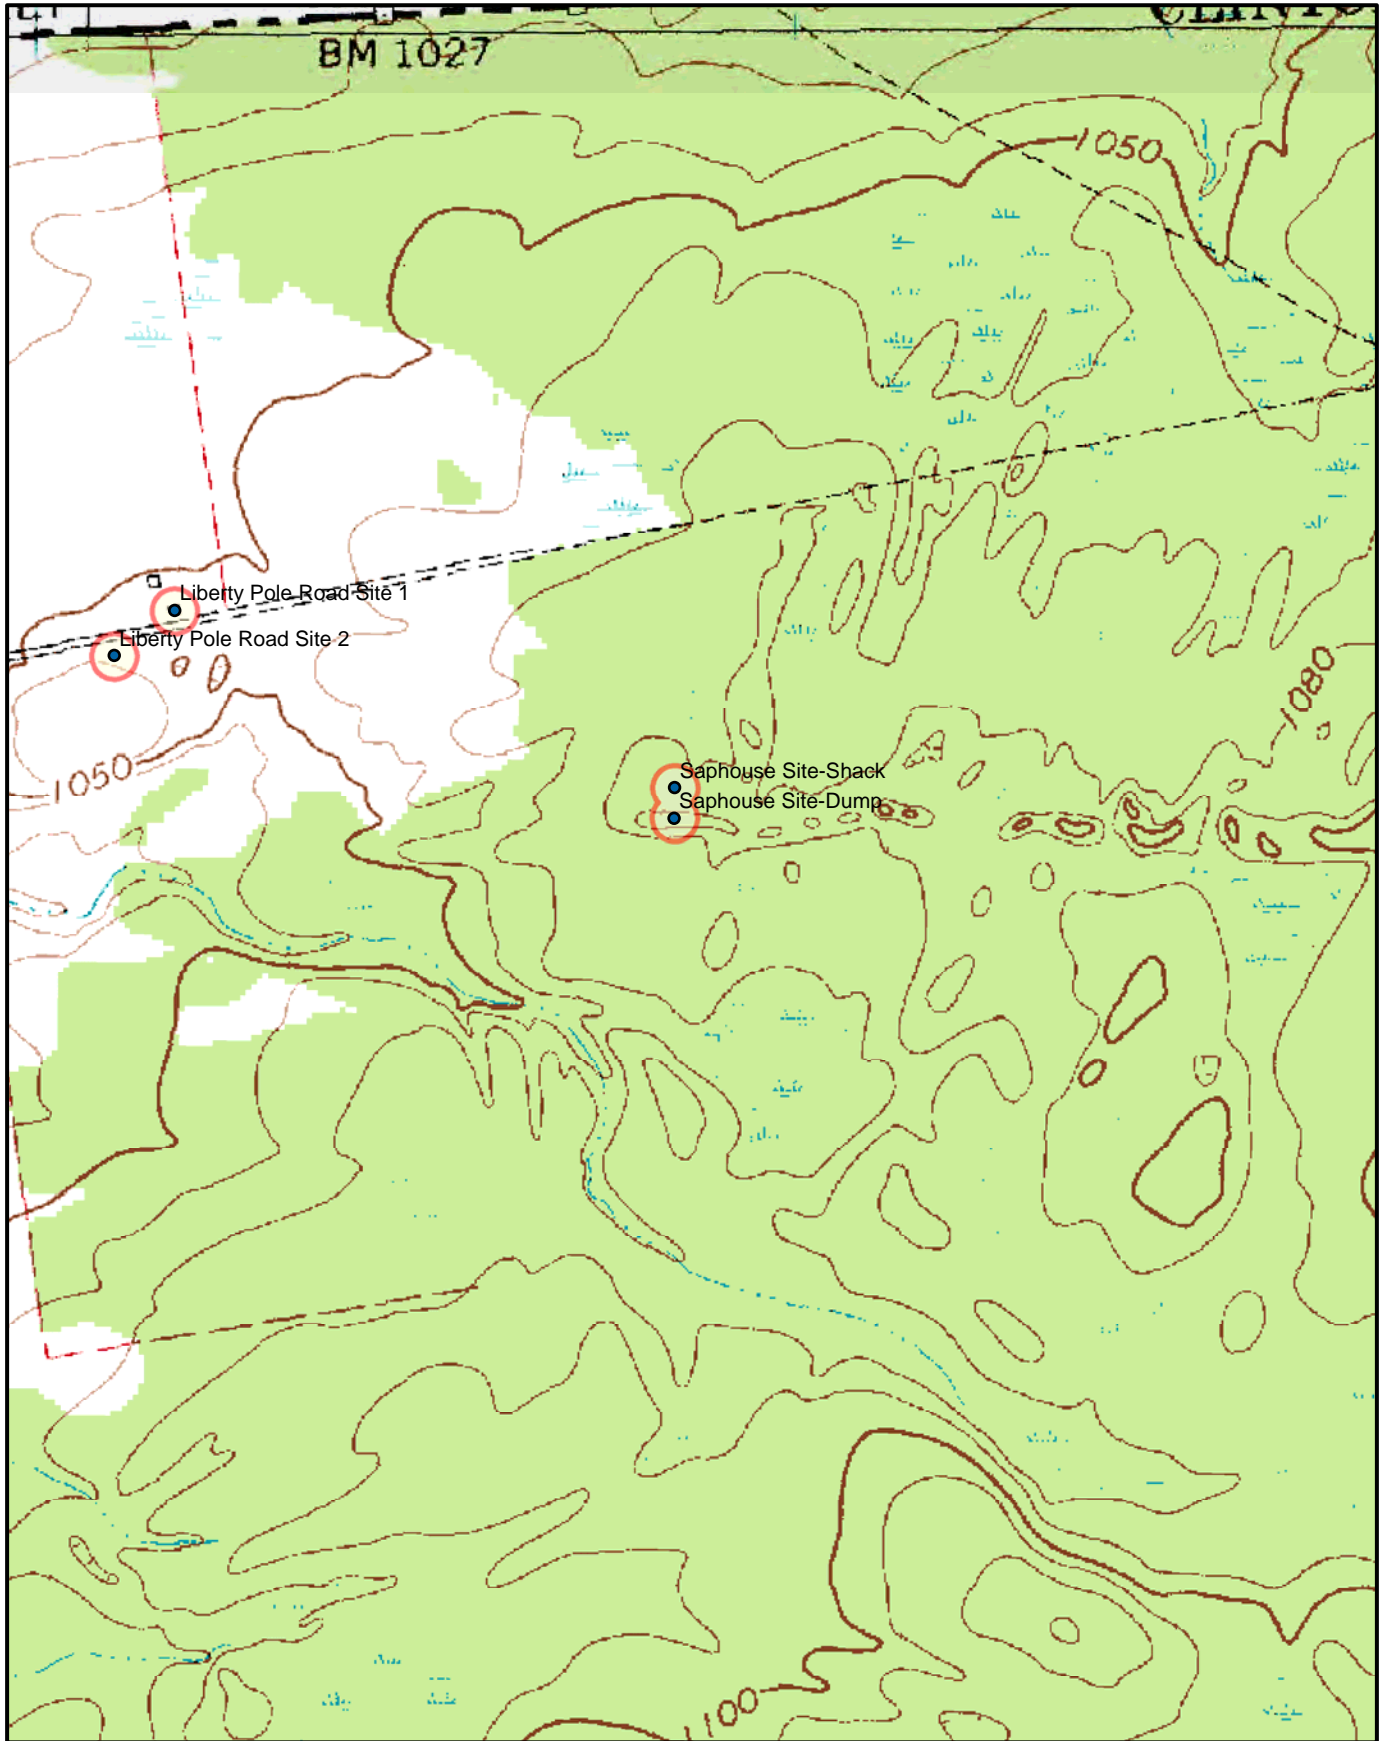

The saphouse is a partially collapsed rough-hewn log structure, which measures approximately 15 feet east-to-west by 18 feet north-to-south. The structure was built with dove-tailed joints at the corners, rests on a shallow sill of dry-laid fieldstone, and lacks evidence of either a cellar or framed floor. The structure is located on the northwestern slope of a small knoll that overlooks wetlands to the north and west. The knoll is covered with a stand of mature sugar maples interspersed with some red maples, beech, birch, and a few cherry trees. Numerous metal vats and metal gallon cans, likely used for boiling and transporting maple syrup, are strewn about the structure.

Twentieth-century rubbish is strewn across the ground surface extending south from the collapsed saphouse. Materials observed in this area included the box-spring for a car or truck seat, “Firestone” rubber automobile tires (post-1903), a metal gallon-jug for “Traffic” motor oil, a metal milking stool, and a grinding wheel. Embossed glass bottles in the rubbish dump include an amber-glass with screw-top gallon-jug for “Clorox Beach” with an Owens Illinois Glass Company mark indicating production ca. 1955, and clear-glass, screw-top bottles for “Lestoil” and “Heinz Catsup”.

Collapsed log structure at the Saphouse Historic Site (view to the southwest).

**Site Description:**

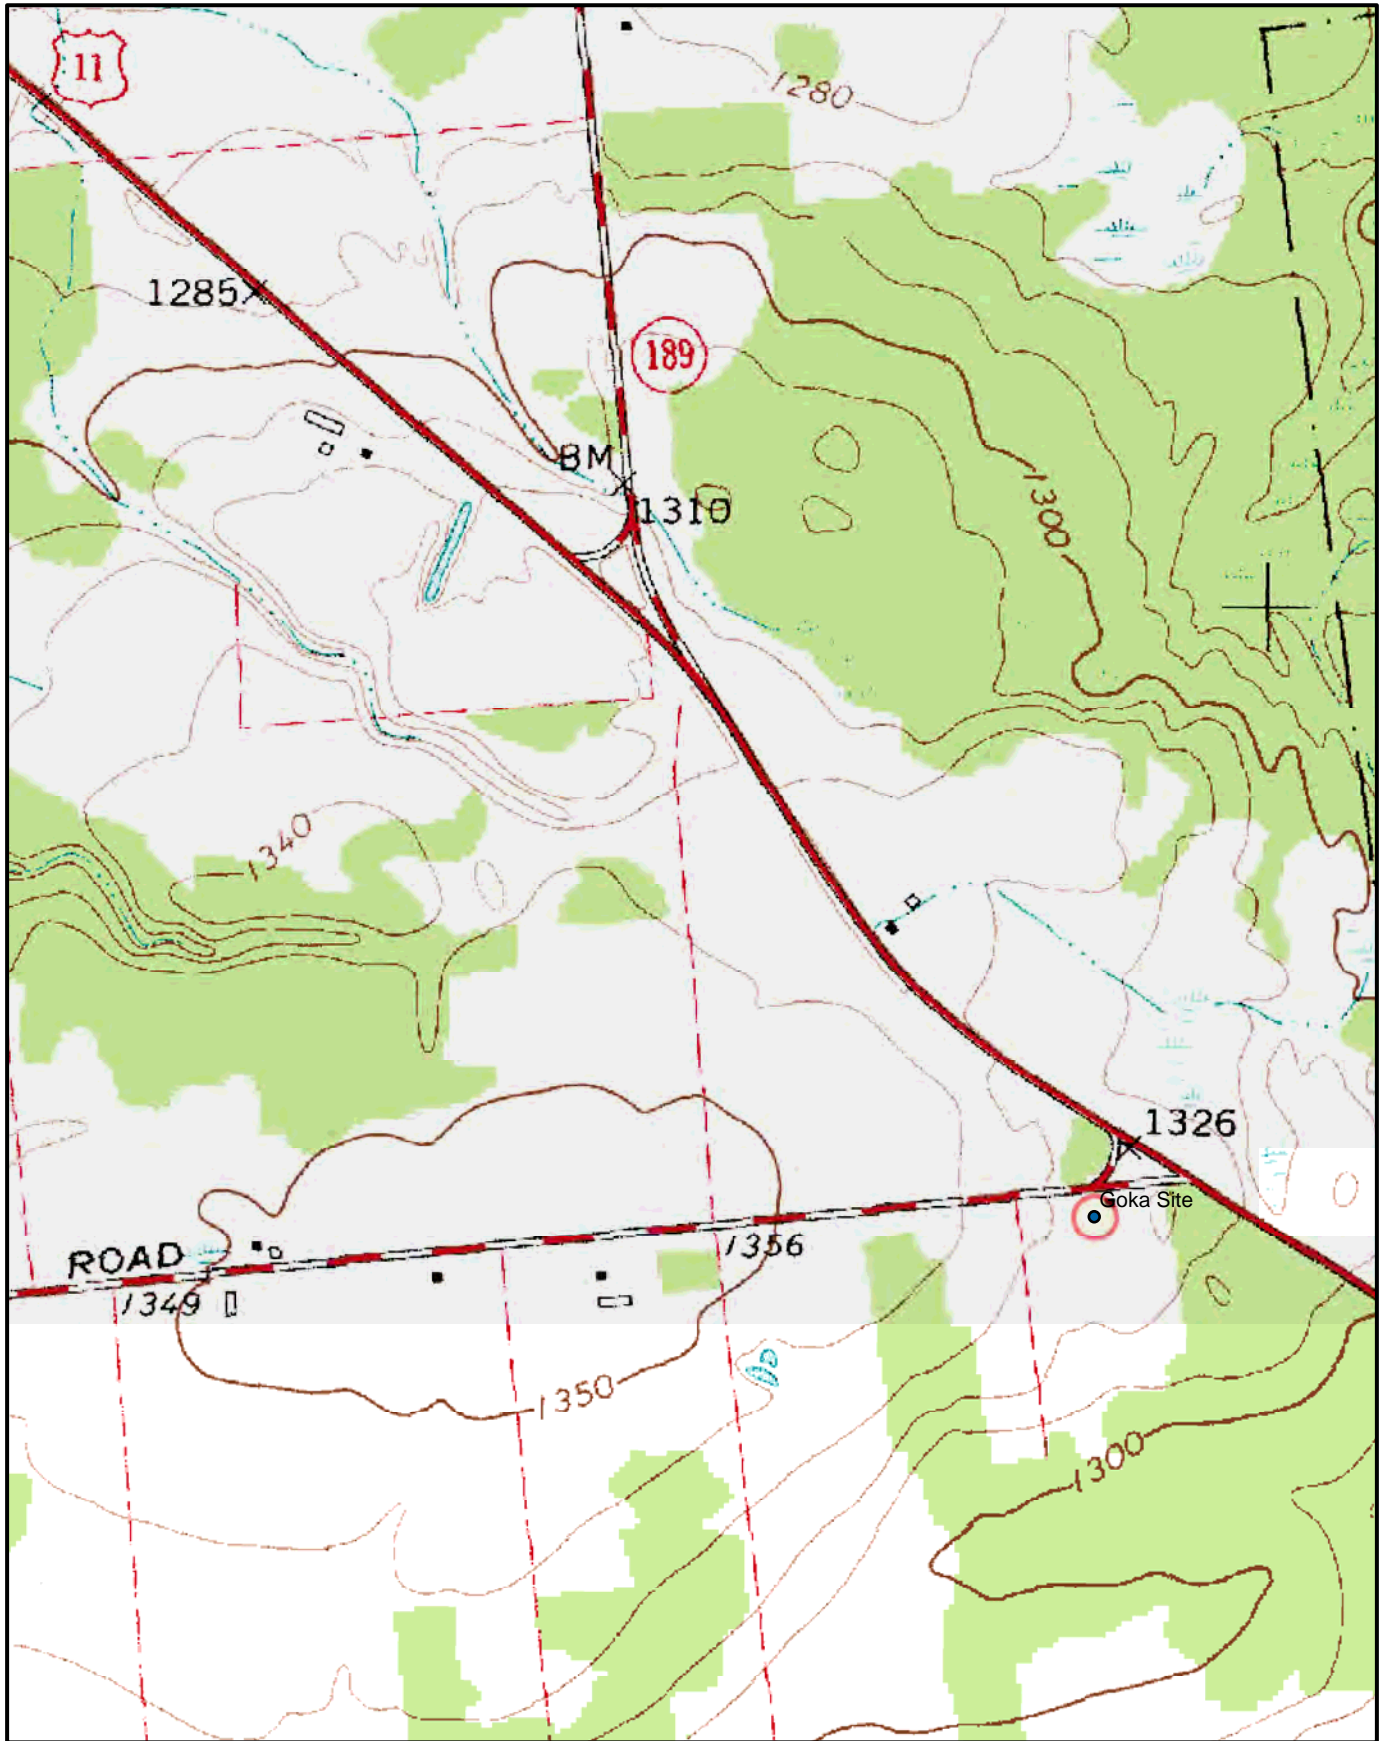

JMA documented the Goka Historic Site during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located in a hay field on the south side of Gagnier Road, approximately 425 feet west of NYS Route 11. A structure is depicted at this location on the 1856, 1869 (identified as the “J. Goka” residence, 1915, and 1964 maps of the area. No remnants of a structure or foundation are visible at the site.

The only visible indication of the former farmstead is a metal pump that marks the location of the well (see photograph below). According to the property owner, the pump is still attached to a 120-foot-long pipe/well that remains in the ground. An embossed metal plate on the pump reads “PAT<sup>d</sup>/AUG 1 99/APR 8 01/MAR 7 11”, which indicates that the pump was installed after 1911.

Mr. Paul Premo, the owner of the property, indicated that the pump is in the well’s original location. He stated that the house at the site was formerly located approximately 50 feet east of the well, and that a barn was located north of the well between the well and Gagnier Road. He described the former house as a simple timber/log structure with a shallow dug-out crawlspace without a full basement. Mr. Premo recalled that the structure was dismantled and the shallow cellar bulldozed during the late 1960s or early 1970s.

A metal pump marks the former location of the well at the Goka Historic Site (view to the west-southwest).

**Site Description:**

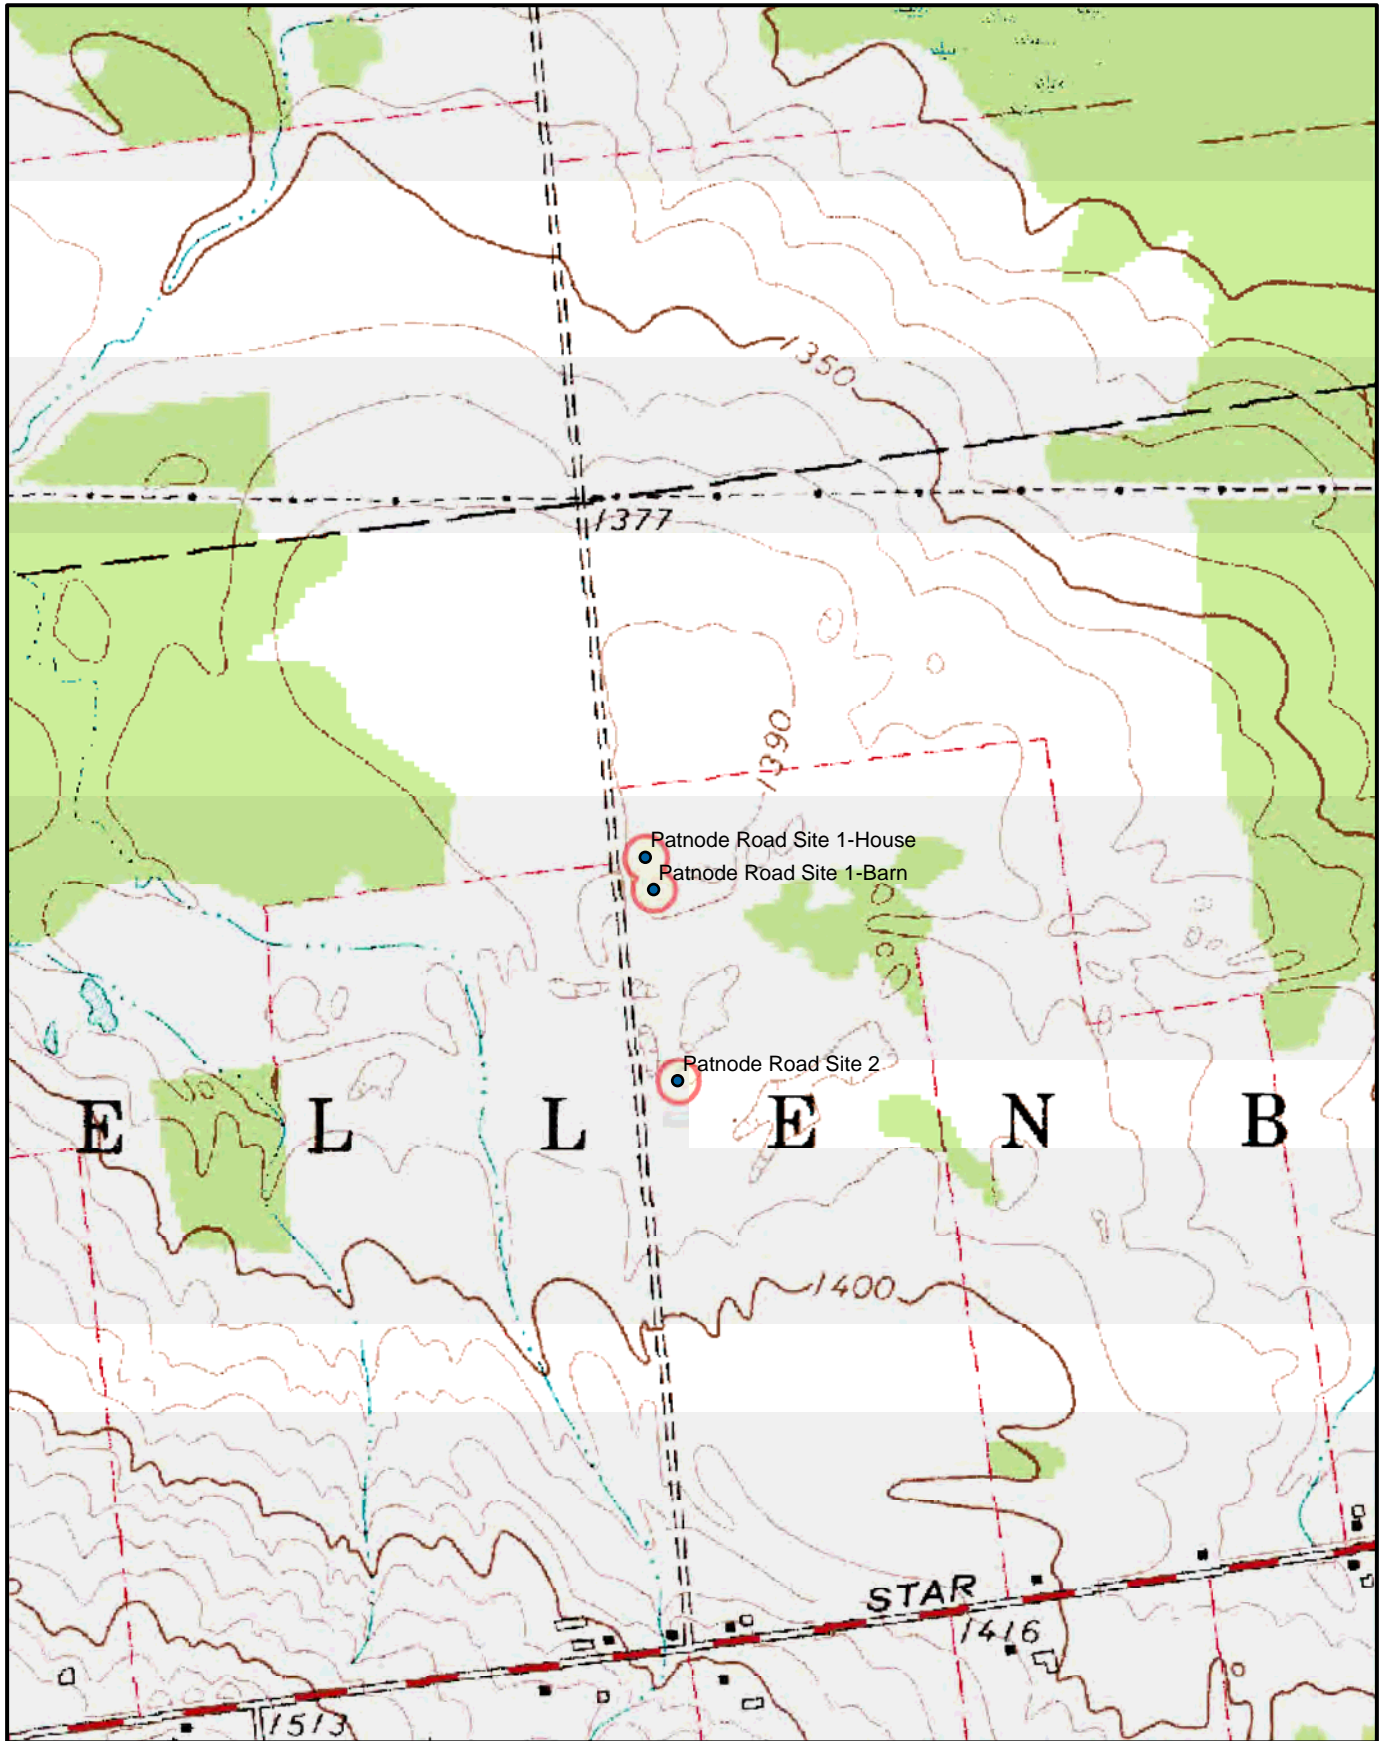

JMA documented the Patnode Road Historic Site 1 during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located in a hay field on the east side of Patnode Road, approximately 1650 feet south of the Ellenburg/Clinton town line. Features observed at the site include a dilapidated and collapsing house, perennial yard plantings, and a fieldstone barn foundation. The dilapidated structure is an 18-foot by 24-foot, 1.5-story house constructed of rough-hewn squared-logs with dovetail joins (see photographs, below). The structure rests on a dry-laid fieldstone cellar and has a metal-sheeting roof. The remnants of a hearth and chimney were observed within the structure however most of the brick appears to have been salvaged. The former yard area extending south from the structure is overgrown with willow, apple, and other fruit trees. A fieldstone barn foundation that measures approximately 42-feet-by-32-feet is located approximately 100-feet south of the collapsing house.

Context and setting of the Patnode Road Historic Site 1 (above);  
detail of dove-tail construction on the collapsing rough-hewn log house (below).

**Site Description:**

JMA documented the Patnode Road Historic Site 2 during the Phase 1B archeological survey for the Marble River Wind Farm in May-June 2006. The site is located in woods on the east side of Patnode Road, approximately 2,675 feet south of the Ellenburg/Clinton town line and approximately 2,560 feet north of Star Road/NYS Route 190.

Features observed at the site include a dilapidated and collapsing log house and relic farm lane or driveway. The house remains consist of a collapsing log structure with an aluminum-sheeting roof. The house consists of a single room that measures approximately 30-feet-by-40-feet, with only a shallow dug-out basement. No materials were collected from within or adjacent to the structure due to the derelict and potentially hazardous condition of the property. No shovel tests were excavated or other archeological testing conducted at the site.
